## P R E F A C E.

THE present volume is one—and the smaller one—of two in which the Muhammadan architecture of what may be described as the more important provincial towns of Gujarāt is illustrated. The larger one deals almost exclusively with the capital—Almadābād—and its suburbs. The two will thus, together, present a pretty comprehensive view of the Muslim remains in the British districts of Gujarāt.

Among the many varieties in the style of Muhammadan architecture prevailing in different provinces of India, that which arose in Gujarāt in the fourteenth and fifteenth centuries is one of the most instructive and deserving of study, as it is also the most beautiful. Like the Sharqi architecture of Jannpur, it bears a markedly local impress, while the elements which compose it are of even a better and higher class than are to be found in any part of Gangetic India. Into any detailed examination of these elements it is not intended here to enter; the other volume will present a more suitable opportunity for remarks on this subject. Though there are not to be found at Almadābād any such early examples as at Bharoch, Cambay, and Dholkā, we have in that city a more consecutive series of buildings illustrative of the development of the style from the beginning of the fourteenth century when it began to take distinctive form and character till the seventeenth when it had begun to decay,—or, at least, when the erection of new buildings of importance architecturally had ceased to be undertaken by the Muhammadans.

The illustrations in this volume, however, present in sufficient detail the earlier Muslim mosques—erected at Bharoch and other towns on the overthrow of the Hindu power by the Moghuls from Dehli in the early part of the fourteenth century. As showing the first examples of the style, they will be found of much interest by anyone setting himself patiently to study the evolution and growth of so beautiful a form of Art; indeed such illustrations are indispensable for any such purpose.

Descriptions of the many details represented in the plates would have greatly expanded the letterpress; but the architectural student will be as well pleased when left to study the drawings and photographs themselves. The drawings are the work of native draftsmen, trained in the Survey, and were all made under the careful personal supervision of Mr. Henry Couzens, my then assistant, or of myself; they have only been reduced by photolithography.

JAS. BURGESS.

THE  
ARCHÆOLOGICAL SURVEY OF WESTERN INDIA.

THE MUHAMMADAN ARCHITECTURE

OF

G U J A R Ā T.

CHAPTER I.

GUJARAT.—HISTORICAL.

GUJARĀT may be roughly defined as the northern division of the Bombay Presidency, and its principal city Ahmadābād lies about 280 miles in a straight line north from Bombay. The former limits of the province may be approximately marked out thus:—bounded on the north by the Luni river, 200 miles north from Ahmadābād, thus including Sirohi and adjoining areas, which now belong politically to the Rajput state of Jodhpur; and on the east by the southern spurs of the Aravalli hills which separate it from Mowār and Mālwa, and by a line not very well defined, but which runs pretty nearly along the 74th meridian across the valleys of the Narmadā and Tāpti, and then along the northern ridge of the Sahyādri or Western Ghāts, separating it from Khandesh and Nāsik districts; on the south it is narrow and the boundary may be drawn at Daman, 180 miles south of Ahmadābād. On the west the seaboard forms a very irregular line,—the gulf of Cambay or Kambhāt lying between the mainland and the large peninsula of Sorath or Kāthiāwād, which is included between the gulfs of Kambhāt and Kachh. Lastly, the Ray of Kachh bounds Gujarāt on the north-west as far as the river Luni. Over all this area, about as large as Great Britain,—and even beyond its limits,—the race and language are the same.

The northern districts of Gujarāt, outside the Bombay Presidency and the states under its control, are now usually spoken of as part of Rajputana; the rest of the area comprises the rich collectorates or zillas of Surat, Bharoach, Khetlā, and Ahmadābād, the Pañch Mahāls districts, and the native states of Barodā, Pālanpur, Cambay, and numerous others in the peninsula and on the mainland, chiefly along the eastern border.

All along the eastern frontier it is hilly or bordered by hills—many of them of very considerable height. Between these and the coast line the country is flat or

undulating; but the Kāthiāwād peninsula is largely diversified by hills,—among which are the Chāmardī hills near the site of the ancient capital of Valabhi; the almost isolated Satruijaya to the south of them, where the Jains have from time immemorial been engaged in covering the summits with temples to their Tīrthamkaras. Still further south is the solitary Talājā hill, and that of Śānā west from it, both perforated with early Buddhist caves. Running across much of the south of the peninsula is the Gir range long famous for its lions, and at the west extremity of which is Gīrnār, 3600 feet high, the ancient Urjayanta or Revatāchala, at the foot of which, in early times, the emperor Aśoka, the great patron of Buddhism, caused a copy of his famous edicts to be engraved on a granite rock. And to the south-west of Gīrnār are the Baradā and other groups of hills.

The population consists of several distinct elements. In the peninsula—the Saurāshtra of early times—the Ābhīras or the Āhīrs have formed one of these elements from a very early date—the Greek geographers speaking of Syrastrēnē as the coast of Abiria. The aboriginal Kolis, Bhills, and Mehers are still numerous in the plains and eastern hills; the fair Kāthīs are a later immigration from the Indus valley into the centre of the peninsula, to which they now give name; and Rajputs, Moghuls, and Marāṭhas have entered it at different periods and largely intermingled with or displaced the earlier settlers.

In early times the Peninsula of Saurāshtra or Sorāṭh was famed in Hindu legend as the retreat of Kṛishṇa and his Yādavas when driven from Mathurā by Jarāśandha the king of Magadha; here he built and fortified Dvārakā, and at Prabhāsa, after a drunken brawl, in which his son Pradyumna and nearly all the Yādava chiefs were killed, he was shot by the hunter Jaras—mistaking him for a deer. At Prabhāsa stood the famous temple of Somanātha, the fame of which provoked one of Muḥammad of Gazni's great iconoclastic raids in 1025. The Buddhists had great establishments at Gīrnār and various other places before the Christian era; and Gīrnār, Satruijaya, Kambhāyat, and other sites have long been Tīrthas or sacred shrines and places of pilgrimage of the Jains.

The coasts of Gujārāt, too, were probably the parts of India best known to the early Alexandrian traders, and through them to the Greek and Roman geographers. Barygaza or Bharukacchī, now Bharuch, was the great emporium of trade in ancient times with Arabia and the Red Sea, and continued to be so down to the time of the discovery of the Cape of Good Hope; and Nausāri, Supārā, Kalyāna, with the coasts of Saurāshtra and Kachh, were known to Ptolemy and the author of the *Periplus of the Erythræan Sea*.

In the first century of our era the Kshatrapa or Satrap dynasty seems to have obtained possession of Gujārāt, probably with their first capital at Ujjain, for Ptolemy mentions that Tiastanes—the Chashtāna of the coins and inscriptions, and founder of the family—had his royal seat there; but the frequency of these mementos of his successors, in Kāthiāwād would seem to suggest that they may have had a second capital and mint in Gujārāt, and that they occasionally resided in the province. Their coins, which occur in great numbers, appear to be dated in the Śaka era and come down to about the close of the fourth century A.D., and we know that the country was conquered by Chandragupta in the first decade of the fifth century. The Gupta dynasty ruled by means of viceroys or Senāpatīs, but about the end

of the same century the senāpati Bhaṭārka threw off the yoke of his masters and established a new dynasty at Valabhi, not far from Sīṅhapura or Sīhor. These rulers held Kāthiawāḍ, Kachh, and the northern and eastern parts of Gujarāt. Under them, and upon the decay and corruption of Buddhism, the Jains seem to have succeeded in obtaining the favour of the secular power in the district, and for long afterwards they continued to be a numerous and influential class. Jainism here, possibly, occupied the shrines as well as the position of the dispossessed Buddhism, and rebuilt or transformed the older temples in honour of their Tīrthmukaras. On the decline of the Valabhis, Chaulukya rulers—possibly allied to the Chalukyas of the Kanarese districts—held sway in continental Gujarāt.

The Valabhi dynasty is pretty well known to us from their land grants, engraved on copperplates, which have been found at Valā and other places in the peninsula and in continental Gujarāt. From these we know of a dynasty of some nineteen princes, ruling from about A.D. 485 to 765.

The Valabhi dynasty was probably overwhelmed by some raid of the early Muhammadans from Sindh. Tradition seems to point to this,<sup>1</sup> and Muslim history mentions that Jumaid, son of 'Abdu'l Raḥmān al Marri, who was confirmed in the government of the Sindh frontier by the Khalif Hashām bin 'Abdu'l Malik (A.D. 724), sent officers against Barāḥ (i.e. Bharoch), Ujjain, and other places and conquered *al Balamān* and *Juzr* (Gujarāt).<sup>2</sup> This was in the time of Śīlāditya IV. of Valabhi (cir. A.D. 710-740); but the so-called conquests were of no duration, and were very soon all lost. The power of the Valabhi dynasty, however, was weakened and a later invasion—possibly under 'Amrū bin Jamāl, in the time of Khalif al Mansūr (754-775) finally dispossessed them of the peninsula.

Towards the end of the seventh century northern Gujarāt is said to have been under a rāja Jayasēkhara, who ruled at Panchāsara, but he was defeated and slain by a king Bhūyada, Bhūvada, or Bhū-rāja from Kanauj,<sup>3</sup> who held the country until a supposed posthumous son called Vamarāja—"Forest King"—set up as independent and ruled till A.D. 805. He founded the city of Aṇḍilapūṭana or Aṇḍilwāḍa on the Sarasvatī, 64 miles north-west from Ahmadābād and 18 west from Siddhapur, as his capital. This city afterwards rose to great importance and was known to the early Arab traders and geographers as Nahrwālah,—now called Pātan or Pātan-Paṭṭana. It continued to be the capital of Gujarāt for six hundred years, yet so completely was it despoiled in the fifteenth century, that D'Anville tried in vain to identify the site of Nahrwālah, and could only conjecture that it may have stood where Ahmadābād

<sup>1</sup> Tod (*Rajasthan*, vol. I. pp. 83, 217, 218) says the invaders were Scythic, probably Parthians from Minagura, and that the fall of Valabhi took place in A.D. 524; so Cunningham, *Arch. Soc. Ind.*, vol. II. p. 70; K. Forbes, *Hds Mālā*, vol. I. p. 21. The Valabhi dynasty, we now know, however, lasted for two hundred years after this—till well into the 8th century.

<sup>2</sup> The name *Balamān* or *Bailāmān* is doubtful and not identified. Could it stand for "Valabhi"? The identification of *Juzr* and Gujarāt might be questioned, as many of the Arab names bear but an imperfect resemblance to the Indian ones, but the mention of Bharoch, &c., shows that the raids were made in the direction of Gujarāt. Abu Zaid makes Al Juzr or Al Juzr the same as Kanauj. Conf. Reinaud, *Relation des Voyages*, tom. I. p. 133, and tom. II. pp. 17, 127.

<sup>3</sup> The *Mirāt-i Ahmadi*, in some MSS. has Phūr des, possibly, as Sir E. C. Bayley suggests, for Phūr-rāja, Rāja Deva of Kanauj. But Mas'ūdī (cir. A.D. 915) says that *Bārāh*, *Bārāh* or *Bārā* was the title of the kings of Kanauj.

now is.<sup>1</sup> Tieffenthaler, however, speaks of Pāttan as a very ancient city, of which the old name was Nehrvalā; and this was also noticed by Rennell in the last century.<sup>2</sup>

The Chaudā or Chāpotkaṭa dynasty is said to have been founded by Vanarāja in Sainvat 802, and to have lasted under seven princes till A.D. 941.

These Chāpotkaṭa or Chaudā princes could not have been very powerful. They do not seem to have had any claim to paramount authority; the Rāṭhōis or Rāshtrakūṭas held the south of continental Gujarāt; and the Chaudās were perhaps looked upon as feudatories to Kanauj, from which Vanarāja is said to have wrested his kingdom, but which probably occupied only the districts along the shores of the Ray of Kachh and not extending into what is now the British district of Ahmedābād. The name of Rāja Bhāyada in the middle of their dynastic list, too, is the very title ascribed by early Muhammadan writers to the kings of Kanauj or Al-Jurz; and again in 941 the Chaudās were supplanted by Mūlarāja, whose father Rāja was a prince from Kanauj, a son of the king Bhuvanāditya.

These Chaudā rājas have left few if any monuments, and the only copperplate grant yet known, is one ascribed to Vanarāja, and is a late forgery.

Mūlarāja, said to have been the sister's son of Sāmantadeva Chaghada, the last of the Chaudās, on whom he made war, and the latter being slain in the contest, Mūlarāja soon extended the dominion which he had thus secured. He subdued Sorath and Kachh and defeated the king of Lāṭa or of the northern parts of the Konkan to the south of the Narmadā. About 982<sup>3</sup> he was threatened by the Sapādahakshiya rāja of Śākambhārī or Sāmbhar from the north, and by an army sent by Tailapa-deva from the Dekhan. He retired to Kanthkot in Kachh till the former should withdraw, and having succeeded in inducing him to do so, he issued from his stronghold to attack the forces of Tailapa, which he defeated slaying the general Bārūpa. He built the temple of Mūlesvara at Maṇḍali and others, and founded the great Śaiva shrine, known as the Rudra-Māla at Siddhapura, to the east of Azhilapura, but did not live to finish it,—possibly the work was stopped on the invasion of his kingdom and not afterwards resumed. He also invited Brahmans from Prayāg (now Allahābād), Kanyakubja or Kanauj, Gaṅgādvāra, Bānāras, and other places in upper India, and settled them at Siddhapura, Sindhapura, Stambhatīrtha (now Kambhāt), and other towns, where their descendants are still known as Audichyas or “northerners.” During his long reign of fifty-five years he evidently fostered Śaivism, and at its close in 996 he abdicated in favour of his son Chāmunda, the second Chaulukya king, and became a Śaiva devotee or Saunyasīn at Siddhapura.

His son Chāmunda (996–1009) is said to have built wells and tanks, but left many such tasks unfinished. The Muslim was beginning to threaten India, and the chroniclers have not dwelt on his reign nor on that of his son Vallabharāja, who died of small-pox, six months after his accession, while invading Mālwa, it is said, to avenge an insult offered to his father, who had abdicated and gone on pilgrimage to Bānāras.

<sup>1</sup> *Eclaircissement*, p. 74.

<sup>2</sup> Tieffenthaler, tome I. p. 385; Rennell's *Memoir of a Map of Hindustan*, 3rd ed. (1793), p. 227; and Conf. Pennant's *View of Hindustan*, vol. I. p. 55. Col. Tod, in 1822, claimed the credit of identifying the place, *Travels in West. India*. Al-Bīrūnī (A.D. 973–1048) calls the city Anhalwārāh: Reinaud, *Frag. Arab. et Pers.*, p. 111.

<sup>3</sup> *Arch. Sur. W. India*, vol. II. p. 193.

Durlabharāja (1009–1021), his brother, built temples and the Durlabha sarovar or lake, at Aṇahilapura, and was a quiet prince.

Bhīmadeva I. the son of Nāgarāja, a younger brother of Durlabha, now ascended the throne, an able and warlike prince. Maḥmūd of Gazni had already made many forays into India, directed against the idol shrines where he was most certain of realising vast booty in gold and gems; and Gujārāt contained one of the twelve great Śaiva Jyōtirliṅgas—the famous temple of Somanātha, on the south coast of Sorāṭh. Against it he was soon to direct a great expedition. In September 1024 Maḥmūd started from Gazni with 30,000 cavalry besides volunteers, and marching to Multān, which he reached in a month, he organised an immense commissariat carriage of camels. Thence he proceeded first to Ajmer, and having captured it, he at once turned south along the skirts of the Aravalli hills to Aṇhilavāḍa, which he reached in six weeks from Multān and took by surprise. Bhīmadeva, unprepared and unable to cope with such a force of cavalry, followed at first the tactics of his great-grandfather Mālarāja and retired to Kaṇṭhkoṭ in Kachh to collect his forces. Maḥmūd pressed on towards Somanātha, but the Hindū king's army soon fell upon him, and it was with difficulty the Muslim invader preserved himself and his army. On Thursday 30th January 1025, Maḥmūd reached Somanātha and next day assaulted the fort which was desperately defended, but on Saturday the assailants entered the place and slew mercilessly all they met, till but few were left alive. "Near the idol was a chain of gold to which bells were attached: the weight of it was 200 māns." . . . "The worth of what was found in the temple exceeded two millions of *dīnars*—all of which was taken. The number of the slain exceeded fifty thousand."

Maḥmūd now proceeded in pursuit of Bhīmadeva, who had taken refuge in a fortress surrounded by water—possibly at Gāndhavi, a few miles north-east of Miyaṇi on the Kāthiāwāḍ coast. All who were found in the fort were put to the sword, leaving much spoil to the barbarous conqueror. Maḥmūd is said to have seriously proposed to take up his residence in Gujārāt, but was dissuaded from it by his counsellors. The Muslim army now proceeded to Sindh, but suffered greatly in the desert, either from being misled by a Hindū guide or from Bhīmadeva and other chiefs hanging in the rear of Maḥmūd and driving him into it. Only after much privation did the army reach Multān on the 2nd April 1026, while Bhīma returned to Aṇhilavāḍa to resume his government. The puppet, Dabishalim or Devishalim, set up by the Muhammadans—probably at Somanātha only,—was soon got rid of and all trace of Muslim authority destroyed.

The province had now rest from further invasion for a century and a half. In this period of respite were raised some of the finest Hindū and Jaina buildings in Gujārāt,—notably the Jaina temple built by Vimala Śāh on Mount Abu in 1032, the Hindū and Jaina shrines on Mount Arasur, the great Rudranāla at Siddhapur, and the restored temple at Somanātha. It was an age in which costly and elaborate sacred buildings were rising in great numbers all over the Dekhan, under the sway of the Chālukyan dynasty, and the kings of Gujārāt were equally zealous in the work.

Bhīmadeva survived the raid of Maḥmūd by nearly thirty years, finally abdicating in 1063, in favour of his son. But these years were not spent in ease; disputes arose

<sup>1</sup> *Das Asir*, in Elliot's *Muslim History*, vol. II. p. 471.

with the native chiefs of Rājputānā and Mālvā; and Bhīma in his wars with them, on the whole extended his dominions. He assumed the title of "king of kings," and some of his successors asserted for themselves even more sounding titles. His queen Udayāmati built the Rāpi's well at Aphilavāḍa, of which splendid work only a fragment now remains.

His son Karṇa,—who took the *biruda* or honorific name of Trailokyamalla—ruled for thirty years, till 1093,—a period of national consolidation and great public works,—secular as well as religious. A Jaina temple at Gīrnār, the Mudhera tank and temples there, and the great Karyasāgara—an artificial lake on the Rupen river at Kunsāgar near Mudhera, known from its extent as "the ten miles tank," and of which the embankment broke only in 1814,—are some of the works ascribed to the reign of this king.

To him is also ascribed the foundation of the city of Karṇāvati on the Sābarmatī river about 55 miles above where it discharges into the Gulf of Kambhāt or Cambay. If tradition may be trusted, the country round where Aḥmadābād now stands was then covered with jungle and inhabited by Bhills and allied aboriginal tribes. One of their chiefs named Āshā of Āshāpalli—now Āshāwāl—was defeated and slain by Karṇa, who built temples to Kochrava-devī and Jayanti-devī, and afterwards formed the town of Karṇāvati or Sri Nagara close by. This afterwards gave rise to the later city of Aḥmadābād. Though the temple has long since disappeared, the village of Kochrava is well known close to Aḥmadābād on the opposite side of the river, and Āshāwāl is a quarter on the east side of the modern city.

After Karṇadeva's death in 1093 and during the minority of his son Jayasīnha surnamed Siddharāja, two vast reservoirs surrounded with stone steps—the Mainala Sarovar at Viramgām and the Malāv or Mainala Talāva at Dholkā—were constructed, and Jaina and Hindu temples built at Karṇāvati.

Jayasīnha, the most popular king of the Solankhi race, was also one of the greatest builders, and during his reign of 49 years was largely developed and improved what is sometimes called the Jaina or Gujarāt style of architecture in sumptuous edifices and reservoirs. He is said to have restored or rebuilt the great Rudramālā shrine at Siddhapur—the largest temple in Western India, the Sahasraliṅga tank at Pāṭan, the Bindusarovar at Siddhapur, the beautiful Śūrya temple at Mudhera, and even the splendid gateways and fortifications of Jhinjhūwādā,<sup>1</sup> with many other similar works. It must be borne in mind, however, that, to a popular and energetic monarch, tradition is only too apt to ascribe works to which he has no historic claim, and this has been pre-eminently the case with Jayasīnha Siddharāja. The works executed during his long and prosperous reign were many and important, but some of those popularly ascribed to him must belong, as their style indicates, to a period at least a century later.

The capital Aṇhilwādā or Aṇhilapātaka under Jayasīnha and his successor Kumārāpāla, during the twelfth century, if not earlier, must have attained to great wealth and splendour, and the state was correspondingly large and prosperous. Al Idrīsī, a contemporary of Jayasīnha, writing in Sicily, tells his readers that "in all Nāhravāra and its environs, people never travel otherwise than in carriages drawn by bullocks."

These vehicles are furnished with fastenings and straps and serve for the transport of merchandise."

Siddharāja's successor was Kumārāpāla who commemorated his rule by many monuments, among which was probably the temple of Somanātha of which the walls are still standing. During his reign (1143–1173) flourished the famous Jaina scholar Hemāchandra or Hemāchārya who exercised great influence over his sovereign, and, in the later years of his reign at least, seems to have gained him over to his own religion.

The prevalence of the Jains, and the temples they built from the eleventh century downwards at Abu and elsewhere in Gujarāt, has led some to call the Hindu style of Gujarāt and the neighbouring Rājputana, the Jaina style, as if it were the style of that sect. The fact, however, is that it is the style of a district and of a period, for the Brahmanical temples of Suddhapur, Somanātha and Ambarnātha, are built in the same style as those of the Jains on Mount Abu and elsewhere; and it is this style adapted to Muhammadan wants that we shall find at a later date characterising the buildings of Ahmedābād, Chāmpānir, and other cities of Gujarāt. It has affinities with the Chalukyan style of the Dekhan, but is far more closely allied to that which prevailed in the Rājput kingdoms of Central India and Rājputānā during the tenth and following centuries. Its adaptations to the requirements of the Musulman conquerors of Gujarāt in the fourteenth century will be noticed at a later point.

Kumārāpāla died at about the age of eighty years in 1073, and was succeeded by his nephew Ajayapāla, a follower of Saivism—like most of the Solankhi princes; but after three years he was murdered, perhaps through Jaina influence, and was followed first by his young son Mālarāja II. for about two years, and then by another son (or nephew) Bhīmadeva II., who, during a long reign of sixty-three years (A.D. 1178–1241), had to defend himself as best he could against successive Muhammadan invasions. In the very beginning of his reign, under Muizn'd-din bin Sam, otherwise called Shāhāb'n'd-din Muhammad Ghori of Gazni, they burst upon Gujarāt, but, after a hard fought battle, they were defeated and driven back. Sixteen years later the Sultān's deputy Qutbu'd-din Aibak returned to avenge this repulse and plundered Gujarāt, but withdrew without effecting the conquest of the country. Wars with the Chauhan of Ajmer had weakened both sovereigns, and though Bhīmadeva and others tried to recover Ajmer from the Muhammadans they were repulsed with terrible loss.

With Tribhuvanapāla the son and successor of Bhīmadeva II., who ruled only for a year or two, the Solankhi or principal branch of the Chalukya dynasty came to an end in 1244. He was succeeded by Visaladeva, the Vāghelā or Vyāghrapallī Rājā of Dholkā, a powerful chief, whose father Viradhavala had tried to assert his independence since 1220. He was alleged to trace his descent from one Dhavala, who had married Kumārāpāla's mother's sister,<sup>1</sup> and founded the town of Dhavalakkaka or Dhavalagriha, now Dholka. His son was Arjorāja, whose son Javaprasida had perhaps been a minister (*vājyachintakari*) under Bhīmadeva. His son Viradhavala was Bhīmadeva's Yuvarāja or deputy, but died before his father about 1239. This family claimed to be of Chalukya descent, and Visaladeva ruled for eighteen years from 1243, as king of Gujarāt. He was a great builder: Dabhoi or Darbhavatī owed its famous Hira gate

<sup>1</sup> But see *Ind. Ant.*, vol. VI, pp. 197 f. and XI, p. 99.

and temple of Vaidyanātha to his taste, and many temples were erected at Girnār, Kambhāyat, Abu, Dholka and elsewhere by his great Jaina ministers—the brothers Vastupāla and Tejapāla, and by others during his reign.

Of his son and successor Arjunadeva (1261-1274) and grandson Śārangadeva (1274 to 1296) the records are as yet scanty. The latter was succeeded by his son Karṇa II., surnamed Ghelo or “the insane,” in the same year that ‘Alāu’d-dīn Khiljī basely murdered his uncle and father-in-law the Sultān Jalālu’d-dīn Firāz Shāh<sup>1</sup> with the heir Ruknu’d-dīn Ibrāhīm, and seized the throne of Dehlī. Early next year ‘Alau’d-dīn sent his wife’s brother Sanjar Khān, known as Ulugh Khān, and his prime minister Malik Nasrat Jālesari with a large army to Gujārāt. They took and plundered Aṇhilavāḷā, destroying the Rudra Māla, and ravaged the country as far as Somanātha which they took, and carried the *Linga* or idol to Dehlī “where it was laid down for people to tread upon” as they entered the mosque. At Kambhāyat or Cambay, Nasrat Khān levied from the merchants, who were very wealthy, large quantities of jewels and precious articles; and throughout the country all the finer temples were deliberately wrecked. By repeated expeditions Ulugh Khān completed the subjugation of the country and was appointed *Nāẓim* or governor, which office he held for a considerable time, but, at the instigation of his rival Malik Nāib Kafūr Hazār-dinārī—a slave sent from Kambhāyat by Nasrat Khān—he was recalled by ‘Alāu’d-dīn and unjustly put to death in 1315. A serious revolt at once broke out, and Kamālu’d-dīn Gurg, who was sent by the young Sultān Qūtbu’d-dīn Mubārak Shāh to quell it, was slain by the rebel leader and the insurrection spread. Malik ‘Atun’l Mulk Multāni was then sent with another army and succeeded in reducing Gujārāt again to obedience. Malik Dinār, the Sultān’s father-in-law, was then appointed *Wālī* or governor, with the title of Zafar Khān, and tried to please his superior by sending large sums to the imperial treasury, but after a few months he was recalled by his foolish, violent, and debauched young sovereign and put to death. A base-born upstart, Hisānu’d-dīn, mother’s brother of Hasan Khusrū Khān Parwārī—the favourite slave of the day,—was next sent to Aṇhilavāḷā, and, immediately collecting his Hindu connexions, he attempted to organise a revolt, but the nobles discovering his design, sent him a prisoner to Dehlī, where after giving him a slap on the face the Sultān made him one of his personal attendants. Mālik Wajihu’d-dīn Kuraishi, with the title of Sadaru’l Mulk, next held the governorship for a while and restored order, but was afterwards promoted to be Vazīr with the title of Tājū’l-Mulk. Khusrū Khān then procured for himself the appointment of governor of Gujārāt, but not content with even this, he assassinated his master, 4th April 1321, and usurped the throne of Dehlī as Nasiru’d-dīn Khusrū Shāh, only to be murdered in turn, in August following, by Ghāzi Beg Tughlaq,<sup>2</sup> who ascended the throne with the title of Ghiyāsū’d-dīn Tughlaq Shāh I. He appointed Wajihu’d-dīn, who bore the title of Tājū’d-dīn Ja’far, to be Nāẓim.

About this time Kambhāyat appears to have been a centre of Muhammadan power, and the large mosque in that city was completed in 1325. On the death of Ghiyāsū’d-dīn in Feb. 1325, his son Muḥammad Tughlaq Shāh (1315-1351) appointed ‘Almad Ayyāz as governor who continued till 1338, with Malik Mukbil the son<sup>3</sup> of a musician, who had received the title of Khān Jahān Nāib Bakhtiyār under him, first as deputy, then as minister, and finally, from about 1338, as governor, which

<sup>1</sup> On the 29th July 1296.

<sup>2</sup> Elliot, *Muham. Hist.*, vol. III. pp. 225 ff.

appointment he held till 1347. This was a time of constant revolts and pillage, the weakness of the government tempted the discontented to plunder. Early in 1345, when near Baroda and Dabhoi with a convoy of treasure and horses for Delhi, Malik Mukbil was attacked by the foreign *Amirs* who had league'd with the Hindu chiefs, and was utterly routed and plundered. 'Aziz Himar, a depraved royal favourite from Dhâr, who had treacherously put to death about eighty of the foreign *Amirs* on the mere ground of their being foreigners, and had thus provoked the revolt, immediately marched against the rebels, but was taken and put to an ignominious death. Muhammad Tughlaq then marched into Gujarât,<sup>1</sup> and with his wonted ferocity suppressed the revolt, sacking Surat and Kambhâyat and putting to death most of the Muhammadan nobles of Bharuch with all other suspected persons. When he left for Devagadh to put down another rising there, one Taghi or Taghâ, who had been a cobbler and slave of the general Safdar Malik Sultâni, raised a fresh rebellion among the Gujarât nobles, seized Patthan, plundered Kambhâyat, laid siege to Bharuch, and put to death Mu'izzu'd-din Nizâmu'l-Mulk the governor of Gujarât and other officials.

This led to Muhammad Shâh's immediate return, and he spent three rainy seasons in Gujarât in putting down the rebels and settling the country. Taghi had fled to Junâgadh, and the second wet season (1348) was spent by the Sultân there, trying to reduce the Chulâsmâ prince<sup>2</sup> of that place. Taghi escaped to Sindh, and Muhammad, after subduing the coasts and many petty chiefs, spent the next rains at Gomâl, where he was taken ill and suffered much from fever. He then crossed over to Sindh in pursuit of Taghi, but died on reaching Thatta, 20th March 1351. Shortly before his death he had appointed Amîr Husain bin Miran as governor of Gujarât with the titles of Malika'sh-shariq and Nizâmu'l-mulk, but Firuz Shâh on his arrival from Sindh, about 1364, dismissed him because he had not aided the imperial army with provisions on its disastrous march across the desert and Ray of Kachh. Zafar Khân, the son-in-law of Sultân Fakhru'd-din of Sonargâh, was appointed in his stead. The revenues of Gujarât, amounting to twenty million *taikas*, were expended on refitting the royal army to return against Thatta, and Zafar Khân accompanied it. On his death in 1371, his eldest son Daryâ Khân succeeded to his fief, but seems to have lived mostly at court and ruled Gujarât by a deputy named Malik Ziâ'u'l-mulk Malik Shamsu'd-din Abûrjâ. Shamsu'd-din Dâmaghâni having offered to the Sultân to increase the usual revenue by four million *taikas*, 100 elephants, 200 Arab horses, and 400 slaves—children of Hindu chiefs and Abyssinians,—an offer was first made to Daryâ Khân to confirm him in the government if he would make this offer. Knowing who had made so extravagant a promise, he declined,<sup>3</sup> and Shamsu'd-din was put in his place. He quickly raised a rebellion in the province, and was slain and his head sent to Delhi in 1377.<sup>4</sup>

The next governor was Malik Mufarrih Sultâni with the title of Farhatu'l-mulk Rasti Khân, and on the assumption of sovereignty by Nâsiru'd-din Muhammad Shâh

<sup>1</sup> Conf. Elliot, *Hist. Ind.*, vol. III. p. 260.

<sup>2</sup> The Muhammadan historians call him Khaigâr, but Khaigâr IV.—if we may trust the *Târikh-i-Sucath*—died in 1333; and the prince now on the throne was perhaps Makalasinâra or Mugalsinâra, 1345 to 1359.

<sup>3</sup> He was put to death by Jaurân Shâh Khân-i-Jahan in 1387.

<sup>4</sup> Elliot, *Muham. Hist.*, vol. III. p. 321; Briggs's *Firishtah*, vol. I. p. 455.

Tughlaq II. in 1387, Malik Ya'kûb Muhammad Hâjî, master of the horse, was styled Sikandar Khân and sent to supersede Malik Mufarrîh. On arriving in Gujarât, however, the latter, at the head of the nobles, rose against him and slew him.

During the troubles that immediately followed no change was made, but in 1391, on the occasion of a second revolt of Farhatu'l-Mulk, Zafar or Muẓaffar Khân, son of Wajihu'l-Mulk, was sent against him, and in an engagement at Jitpur near Kambha, a dependency of Pāṭṭan, Farhat was defeated and slain 4th January 1392. This Zafar Khân's father is said to have been a Hindu of the Tāṅka tribe of Rajputs,<sup>1</sup> a chief of Thāsra in the Kheda district of Gujarât and named Sadhāran, who was converted to Islām and took the name of Wajihu'l-Mulk, while his brother Sadhu was re-named Shamsher Khân. Muẓaffar Khân extended the Muhammadan power in Gujarât; exacted tribute from the chief of Junāgaḍh (1395); invaded Mālwa and after various successes returned to Nahravāla in 1396; destroyed the temple of Somanātha; marched against the chief of Ilar, and probably built the mosque there. Finally, favoured by the invasion of the Mughals under Saheb Kirān Amir Timūr Gūrgan, commonly known as Timurlang in 1398, Muẓaffar assumed the position of an independent prince.

This hurried résumé of a century's history of Gujarât may suffice to show how little calculated the Musulmān rule then was to foster any art or handicraft. It was a period of rapine and plunder and almost certainly of untold suffering. Yet we are not without monuments of this time. The great mosque at Bharoch, however, shows how they were erected: the Hindu and Jaina temples were torn down and their materials re-arranged to suit the wants of the destroyers.

In 1403, Muẓaffar's son Tātār Khân is said to have seized his father and sent him prisoner to Asāwal. Tātār then assumed the titles of royalty under the style of Sultān Nasir'u-d-dīn Muhammad Shāh, and collected an army to march against Dehli but was poisoned at Pāṭṭan by Shams Khân. His father was brought from Asāwal by night and the whole army at once submitted to him (1404). At the request of the nobles he assumed royal honours as Muẓaffar Shāh. He then took Dhār and consolidated his power, but after an expedition, perhaps against Kachh, he died in July 1410 in the seventieth year of his age, not altogether without suspicions of having been poisoned by his grandson Ahmad whom he had already employed in a warlike expedition into Mālwa.

After some struggles with his relatives and others, Ahmad Shāh got securely established on the throne of Gujarât and reduced many hitherto almost independent districts, forcing on the inhabitants the Muslim religion.

In the first year of his reign (1410-11) he founded the city of Ahmadābād on the left bank of the Sābarmatī river, near the old town of Asāwal and probably on the site of Kariyāvati, founded by Kariyadeva I. The fort, he erected round the site of an old temple of Bhadrakālī—the terrific and bloody form of Durgā;—and from this the fort still retains the name of “the Bhadr.” As a strict Muhammadan he erected a mosque within it, constructed from the materials of the Hindu temples.

<sup>1</sup> Regarding the Tāṅka tribe, see Beames's ed. of Elliot's *Races of the N.W. Prov.*, vol. I. pp. 109, 114; Tod's *Rijstān*, vol. I. pp. 103 ff. (Madras ed. pp. 94 ff.).

While his new capital was being built, Ahmad Shāh was busy destroying the temples of the Hindūs, forcing their chiefs to embrace Islām, carrying off their daughters, and consolidating his power. In 1415, he destroyed the temple at Siddhapur; in 1416, he marched against Dhār; and in 1419 he ravaged the lands round Sōngadh on the Khandesh frontier and built a fort with a mosque there. Next year he built the fort of Dohad on the Mālwa border; and in 1427, that of Ahmadnagar. He was in fact almost continually engaged in war, and pressed his conquests as far as Kōṭā and Bundī. In 1442<sup>1</sup> he died, after a reign of thirty-two years.

Under Ahmad Shāh's successors Ahmadābād steadily rose to be the finest city in India. "The situation," says Abul Fazl,<sup>2</sup> writing towards the end of the sixteenth century, "is remarkably healthy, and you may here provide yourself with the productions of every part of the globe. There are two forts, on the outside of which is the town, which formerly consisted of three hundred and sixty puras (or quarters) but now (in 1590) only eighty-four are in a flourishing condition. In these are a thousand stone masjids, each having two large minarets and many wonderful inscriptions." Each mahalla or quarter, as Firishlah tells us,<sup>3</sup> had a wall surrounding it; the principal streets were sufficiently wide to admit of ten carriages abreast; and "it is hardly necessary to add," he says, "that this is, on the whole, the handsomest city in Hindustan and perhaps in the world."

Ahmad Shāh was succeeded by his son Muhammad Shāh Karīm Ghiyāsu'd-dunyā wa-ud-dīn, styled Zerbukhsh or "Gold-bestower." Marching upon Chāmpānir, the native chief called in the aid of Mahmūd Khilji of Mālwa, when Muhammad Shāh prepared for flight. The nobles caused him to be poisoned and set up his son Jalāl Khān as Qutbu'd-din Shāh 12th February 1451. Mahmūd Khilji now took Sultānpur, and marched into the Bharuch district and then by Nadiād to Baroda, which he plundered but was defeated by Qutbu'd-din at Kāpadyānj after a sometime doubtful struggle. 1454. Qutbu'd-din next interfered on behalf of the Nāgor chief against the Rāya of Chittor, deprived the latter of Mount Abu which he bestowed on the Devra chief of Sirohi. He then besieged Chittor, but on the Rāya promising to pay tribute he did not press the siege.

Qutbu'd-din died 24 May 1459 and was buried in the vault of his father Muhammad Shāh. In his reign the buildings erected at Ahmadābād and still remaining are the mosques of Qutbu'd-din and Malik Shābān, the Kankariya lake, the tomb of Shāh Ahmad Khaṭṭān at Sarkhej, the small shrine at Batwā, and Darya Khān's tomb.

His uncle Daud was raised to the throne but soon deposed because of his follies. Faṭh Khān, son of Muhammad Shāh and grandson of Ahmad Shāh by Bibi Moghlāi, a youth of fourteen, was now elected (June 1459), with the title of Shamsu'l-Mulūk wa'l-haq Nā-siru'd-dunyā wa'd-din Abul Faṭh Mahmūd. He is usually styled Bigarāh or Baiqara, and was perhaps the greatest of the Gujarāt kings. Twice he delivered Nizām Shāh, the Bahmani sovereign, from the attacks of Mahmūd Khilji. In 1467

<sup>1</sup> The *Tuhfat Akbari* says on the 4th Rabi'ul akhar 846; the *Tarikh-i Alfi* also gives 846; Briggs's *Firishlah* has 4th Rabi'ul awal 847 or July 14th, 1413.

<sup>2</sup> Gladwin's *Ayren Akbari*, vol. II. p. 63.

<sup>3</sup> Briggs's *Firishlah*, vol. IV. p. 14.

he attacked Rāo Maṇḍalik of Junāgaḍh, and, after repeated invasions, reduced Sorath to a province in 1472, governed by officers appointed by the king. At Junāgaḍh, he erected the large mosque<sup>1</sup> and a palace, and renamed the town Mustafābād. During his absence from Aḥmadābād, Malik Jamālu'd-dīn was governor of the city with the title of Muḥāfiẓ Khān, the same who afterwards built the very beautiful private mosque that still goes by his name. Maḥmūd next invaded Kachh<sup>2</sup> and completely defeated the Sunrā and Sodhā chiefs, then he turned his arms against the pirates of Dwārka or Jagat, whom he defeated with great slaughter, took the fort, sent Bhimarāja prisoner to Aḥmadābād to be hewn in pieces there, and destroyed the idol temples, building a mosque in their place. On his return he equipped a fleet at Gogḥā to chastise the pirates of the Malabar coast, and then went back to Aḥmadābād by way of Kambhāyat. In 1479 he sent an army to ravage the country round Chāmpānir, and about the same time he founded the city of Maḥmūdābād on the Wātrak river about eighteen miles south of Aḥmadābād. In 1482 the Rāwal of Chāmpānir having killed one of Maḥmūd's officers who was making forays into his territory, war was declared against him. Sultān Ghiyāsu'd-dīn Khilji of Mālwa advanced to aid the Rāwal, but Maḥmūd marched to Dohad to meet him and he retired. After a long siege, Chāmpānir was taken in 1484 and the remains of the garrison put to the sword. Maḥmūd now built a wall round the town of Chāmpānir at the foot of Pāvagaḍh hill and named the place Muḥammadābād, which speedily rose to be a large and rich city. All that now remains of it, however, is portions of the wall, the fine large Jāmi' Masjid and other mosques and tombs built at this period, and now hidden away among trees and thick undergrowth.

After this, in 1487, he caused Aḥmadābād to be surrounded by a wall and bastions, and in commemoration of the date of their completion he caused to be inscribed on the face of the fortification the sentence—

من دخله كان امنا

i.e., "Whoever is within is safe";—the numerical values of the letters making 892, the Hijra date.

He planted the streets of the city with trees, adorned it and its suburbs with splendid buildings, and carefully fostered its trade and handicrafts. Among the buildings still left, belonging to this reign, are the Śarangpur Queen's mosque, Dastur Khān's, Muḥāfiẓ Khān's, Miyan Khān Chishti's, Achut Bibi's, and Sayyad Usman's mosques, parts of the Shāh 'Alam and Batwā buildings, and Dādū Hari's step-well and mosque. Aḥmadābād at this period had attained to great wealth, size, and splendour; and though Chāmpānir was a favourite residence of the king, and must have been largely peopled from the older capital, it did not diminish its importance. It had good streets, squares, and houses of stone and whitewashed brick with flat roofs.<sup>3</sup>

In 1506, the Gujarāt squadron combined with the Turkish fleet and defeated the Portuguese off Chaul; and in 1508 Maḥmūd was able to secure for his nephew Mirān Muḥammad 'Adil Khān Fārukhi the throne of Khandesh. Maḥmūd died 22 Nov. 1511,

<sup>1</sup> *Arch. Sur. West. Ind.*, vol. II, p. 141 and pl. xxv.

<sup>2</sup> The Kutch annals are deficient in dates, but this was probably in the time of Jām Kānyoji, whose capital was at Ajapur.

<sup>3</sup> Stanley's *Barbosa*, p. 58.

in the seventieth year of his age, and was buried at Sarkhej in the mausoleum of Shaikh Ahmad Khaṭṭī.

For the next half century or more, under his successors, Ahmadābād considerably declined, and never afterwards recovered its former greatness. Sultān Maḥmūd Shāh I. was succeeded by his son Khalil Khān, whose mother was Rāpt Hirabāi the daughter of a Rājput chieftain, Rāpā Nākha, who lived on the banks of the Mahi. He was forty-one years of age and assumed the title of Muzaḥfar Shāh II. Modani Rāi, the Hindu minister of Maḥmūd Khilji of Mālwa, attempting to dethrone his master and being aided by the Rānā of Chittor, Muzaḥfar had to contend with both, and having captured Māndu in 1518, he reinstated Maḥmūd. The Chittor Rānā, Saugram, however, again invaded Mālwa and even Gujarāt and had a second time to be resisted. During this reign the kingdom was prosperous and cultivation was greatly extended, especially in Jhālāwād. Muzaḥfar died 17th February 1526.

He was succeeded by his son Sikandar Shāh, who, after a reign of about three and a half months, was assassinated by Inadn'l-mulk Khush Kadam on 30th May, when his younger brother Nāsir Khān was raised to the throne with the title of Maḥmūd Shāh II. He reigned about three months, when an older brother Bahādur Shāh, returning from Jaunpur, deprived him of the kingdom, captured and executed Inadn'l-Mulk, and mounted the throne, 20th August 1526. His brother Latif Khān sought to deprive him of his rule, but was defeated and died of his wounds. Bahādur directed the construction of the fortress of Bharoch, and was almost constantly engaged in war. The Portuguese, who wanted possession of Diu, had to be watched and frustrated. He twice invaded the Dekhan in aid of the Khandesh and Berar rulers against Burhān Nizām Shāh of Ahmadnagar; he subdued Mālwa in 1531; annexed Virangām and Māndal in Jhālāwād, and Raism, Bhilsā and Chauderi in Mālwa; attacked Chittor but was bought off; and captured Ranthambor. Having offended Humāyūn of Delhi, however, the Mughal sultān attacked him just after he had captured Chittor in 1535 and defeated his army. Humāyūn, following up his first success, took Māndu and then Chāmpānir and finally all Gujarāt except the peninsula. Fortunately for Bahādur at this juncture Sher Shāh revolted in Bihār and Jaunpur, and Humāyūn had to proceed to the north, leaving his brother Hindāl Mirzā, his uncle Mirzā Yādgār Nāsir, and other officers in charge of Gujarāt. The Gujarāt nobles<sup>1</sup> at once rose against the Mughals, and, with Bahādur at their head, they defeated Mirzā 'Askari and the imperial armies near Maḥmūdābād and expelled them from the country in 1536. Meantime, Bahādur having had to court the aid of the Portuguese had granted them permission to build a factory at Diu, which they fortified. Repenting of his action he wished to expel them, but was inveigled into visiting the viceroy on board his ship, and while returning in his barge was barbarously slain, 14th February 1537, in the 31st year of his age.

During the next thirty-seven years, Gujarāt was torn by factions, the chief nobles in turn setting up minors as puppet kings. The first of these was Mirān Muḥammad Shāh II. Āsiri, the nephew of Bahādur Shāh, who died shortly after his accession.

<sup>1</sup> Ghuzanfer Kokah, brother of Mahli Qāsim Khān, was imprisoned by Mirzā 'Askari the governor of Ahmadābād, but escaped to Diu and betrayed to Sultān Bahādur the schemes of 'Askari.—Blochmann's *Ain-i Akbari*, vol. I. p. 348.

The nobles then crowned Muḥammad Khān, son of Latif Khān the brother of Bahādur, a boy of eleven years,—Daryā Khān and Imādū'l-Mulk ruling in his name. The former, however, soon expelled Imādū'l-Mulk, but let Ālam Khān Lodhi manage affairs, and he revolting, with the king's aid, finally overthrew Daryā Khān, but was in turn driven out. About 1545 this Muḥammad III. began to resume the lands granted to Rajput chiefs on his north-eastern frontier and to persecute the Hindūs, thus provoking disturbances. Quarrels also rose among the nobles, owing to the king's partiality for low-born favourites; and in 1554 he was murdered by Burhān, one of his own servants.

The nobles, with I'tmād Khān the prime minister, now set up Qaziū'l-Mulk with the title of Aḥmad Shāh II. (15th February 1554), pretending that he was the son of Prince Aḥmad Khān formerly governor of Aḥmadābād; but—after a troubled reign of seven years, during which the intrigues and quarrels of the nobles weakened the state and left the king no real influence—he was found murdered at the foot of the palace wall, April 21st, 1561.

I'tmād Khān, the prime minister who had caused the murder of Aḥmad Shāh II., now set up a youth named Nathā, whom he styled Muzaḥfar Shāh III., alleging that he was a posthumous son of Maḥmūd Shāh. I'tmād Khān, however, provoked the other nobles by his assumptions, and the country was parcelled out among the Amīrs and continued in a state of civil war. In 1571 the Mirzās sons of Husain of Khorāsān having quarrelled with Akbar came to Gujarāt and joined Changiz Khān, son of I'tmādū'l Mulk, a Turkish slave and one of the most powerful opponents of I'tmād Khān, who now marched on Aḥmadābād and within eight miles of the city defeated I'tmād Khān Gujarātī and Sayyād Mirān bin Mubārak, taking possession of the capital. I'tmād Khān fled with the king to Morāsā, and after some further attempts to regain his power he invited the emperor Akbar, who was only too glad of a pretext for driving out the Mirzās and reducing Gujarāt under his own imperial sway. He accordingly marched on Aḥmadābād, which he took possession of on 20th November 1572, and thus put an end to the separate kingdom of Gujarāt. Muzaḥfar Shāh, who had abdicated in favour of Akbar, was sent to Agra, and subsequently placed in close confinement.

Gujarāt was now again governed by viceroys appointed by the court of Dohli. Akbar's first governor was his foster brother Khān-i A'zam called Mirzā Aziz Kokā or Kokaltāsh, while to other nobles provincial commands were assigned. But no sooner had Akbar himself retired than the old Gujarāt nobles, together with the Mirzā Muḥammad Husain, attacked the new rulers with such success that Akbar had to make forced marches to their relief, and,—defeating the rebels before Aḥmadābād,—after only eleven days' stay, returned to Agra. Mirzā 'Aziz Kokā in 1575 retired into private life and 'Abdu'r-Rahim Khān, surnamed Khān Mirzā,<sup>1</sup> son of Bairām Khān, and only about nineteen years of age, was made viceroy, but under the guidance of his deputy Wazīr Khān. The administration, however, was unsatisfactory and Rāja Todar Mal was sent to make a revenue settlement of the province, while Wajihū'l Mulk Gujarātī was appointed *divān* to administer civil justice under the viceroy.

<sup>1</sup> Blochmann's *Āin-i Akbarī*, vol. I. p. 334.

In the latter part of 1577, Shabābu'd-dīn Aḥmad Khān was appointed viceroy, and began to strengthen his military posts and to settle the revenue, when his nephew Mirzā Khān—sent against Amin Khān Ghori, who had continued to hold Junāgaḥ—was totally defeated by that chief and his ally the Jām of Nāwanagar, while at the same time Muzaḥfar Shāh III. having escaped from his confinement in 1578, arrived in Gujaraṭ, and collecting a respectable army was joined by 700 or 800 Mughals at Khiri in Sardhār. I'tmād Khān Gujaraṭi, again restored to favour, had just been appointed viceroy, when Muzaḥfar Shāh took Aḥmadābād in 1583, and then meeting I'tmād Khān and Shabābu'd-dīn, who had returned to assist, he inflicted a severe defeat on them. Quṭbu'd-dīn Muḥammad Khān, one of the imperial commanders,<sup>1</sup> now advanced from the Khandesh frontier by forced marches and threw himself into Baroda, where he was besieged by Muzaḥfar, and being induced by promises to come out to treat for peace, he was treacherously killed. Bhuroch was also surrendered to Muzaḥfar, who was now reinstated king of Gujaraṭ.

At the close of 1583 Akbar, a second time, sent Mirzā Khān to Gujaraṭ as viceroy. Muzaḥfar hastening from Bhuroch met him at Sarkhej near Aḥmadābād, where a pitched battle was fought 22nd January 1584, in which Muzaḥfar was entirely defeated and fled to Kambhāt; he was again defeated by Mirzā Khān at Nadol, and thence he escaped to Rājpiplā. For these two victories Akbar bestowed the rank of Khānkhanān on the viceroy. Muzaḥfar fled to Gondal, and after being cheated by Amin Khān Ghori of Junāgaḥ out of two lakhs of *Mahmudi*,<sup>2</sup> by promises of aid, he was left to be hunted by the viceroy in the Baradā hills. Thence he escaped, and after another defeat in Gujaraṭ, again found refuge in Rājpiplā.

In 1590 the Khānkhanān, who had laboured for the prosperity of the country, was recalled and Ismā'il Qulī Khān appointed viceroy; but in a few months he was superseded by Mirzā 'Aziz Kokaltāsh, for the second time governor. Muzaḥfar again returned to Sorath in 1591 and was joined by the chiefs of Nāwanagar and Kachh<sup>3</sup> and Daulat Khān Ghori of Junāgaḥ. The viceroy marched into the peninsula with a powerful army, defeated Muzaḥfar and the Jām; took and plundered Nāwanagar; and laid siege to Junāgaḥ, where Muzaḥfar and the Jām had fled for refuge; but he had to retire for want of grain. After seven or eight months the viceroy again marched against Junāgaḥ, and, binding the Jām to provide supplies of grain, after a siege of three months, the garrison surrendered. Muzaḥfar had now taken refuge at Dwārkā and on being pursued he escaped to Kachh, where the chief delivered him up to a force sent to secure him. On the way to the viceroy's camp at Morbi, Muzaḥfar cut his throat with a razor, and his head was then cut off and sent to the imperial court by the viceroy. A'zam Khān was now summoned to court 1592, but his friends representing to him that Akbar was displeased with him and was seeking an opportunity to imprison him, without leave or notice he set sail with his family for Makka 13th March 1594, O.S.<sup>4</sup>

<sup>1</sup> He belonged to the Atghh Khail and founded several mosques, &c. at Lahor.

<sup>2</sup> The *Mahmudi* and *Changizi* were about equal, but varied in value from about 7½ to 11 annas, that is from 19 to 28 *dams* or from 47 to 79 *tanakhs*. At the rate of 20 *dams* or 50 *tanakhs* to the *Mahmudi*, the sum obtained from Muzaḥfar by Amin Khān would be equal to about 1,00,000 rupees.

<sup>3</sup> Rāo Bhāmal (A.D. 1585–1631) son of Khangār.

<sup>4</sup> The Hijra date given by other writers is 1st Rajab 1002. He returned to Virāwal in the beginning of 1003, and was made governor of Bilāz.

In 1595 Sultān Murād Mirzā second son of Akbar was sent as viceroy, but going soon after to the Dekhan, Surajsinh was appointed deputy in Gujarāt and defeated Bahādur, son of the late Muẓaffar Shāh, who had excited a rebellion. Murād Mirzā having died 1st May 1599, Mirzā 'Aziz was appointed for the third time, and sent Shamsu'd-din Husain as his deputy to Ahmadābād. In 1602 he made his eldest son Shādmān his deputy; and on the accession of Jahāngir, Oct. 16th, 1605, Qulij Khān was appointed to Gujarāt, but he did not join the appointment, allowing Aziz Kokā to act till the latter was transferred to Lahor in 1606. Then Sayyid Shaikh Farid Murtaẓā Khān-i Bukhārī was put in charge of the province. Almost his only act was to repair the fort of Kaḍi about 27 miles north-west from Ahmadābād. His relatives oppressed the people and disturbances broke out among the native chiefs and forces had to be sent from the north to suppress them. In 1609 Mirzā 'Aziz Koka was again made viceroy but remained at court sending his son Jahāngir Qulī Khān as his deputy, and after two years was succeeded by 'Abdullah Khān Bahādur Firūz-Jang as 13th viceroy, with Ghiyāsu'd-din as his minister, and with orders to avenge a recent inroad by Malik 'Ambar Habshi governor of Daulatābād. This was unsuccessful, and in 1616 he was sent a second time with the prince Shāh-Jahān, when Malik 'Ambar gave up most of the places taken from the Mughals, and most of the other Dekhan princes submitted. On his return to Dehli, Shaikh Hassū Muqarrab Khān was appointed to the government, with Muḥammad Saif as his *diwān* but he gave no satisfaction and was recalled. Jahāngir visited Gujaraṭ in person and hunted elephants in the Dohad and Chāmpānir forests, but did not enjoy the climate of Ahmadābād.<sup>1</sup>

The successive viceroys after this were as follows:—

Prince Khurram, afterwards Shāh Jahān who built the Shāhi Bāgh, 1616.<sup>2</sup>

Sultān Dāwar Bakhsh surnamed Mirzā Bulāqī, son of Sultān Khusro, 1622, with Khān 'Azim Mirzā Aziz Kokaltāsh as adviser.<sup>3</sup>

Khān Jahān deputy viceroy, sent by Shāh Jahān to the emperor, and Muḥammad Saif, styled Saif Khān acted, with Yusuf Khān as minister, 1624.

Sher Khān Tar, with Khwājah Haiyāt as minister, 1627.

Islām Khān, with Khwājah Juhān as minister, 1632.

Bāqir Khān, Riāyat Khān being minister, 1632.

Sipahdār Khān, foster-brother of Aurangzib,—Riāyat Khān continuing as minister, 1633.

Saif Khān, 1635.

Mir Muhammad Bāqir with the title of 'Azam Khān,' end of 1635, with Riāyat Khān and afterwards Mir Muhammad Sābar as ministers. In his time the viceroyal residence (now used as the Jail) was built. It was during his governorship that the

<sup>1</sup> Jahāngir disliked Ahmadābād and abused it heartily.—Elliot's *Muham. Hist.* vol. VI. p. 358; conf. Douglas's *Bombay and West. India*, vol. I. pp. 301.

<sup>2</sup> Sir Thomas Roe's *Journal*, ch. ix.

<sup>3</sup> This noble, so often in authority in Gujaraṭ, died at Ahmadābād in 1624, and was buried close to his father in 'Azim Khān's mausoleum at Dehli, where a splendid marble monument was erected over his tomb,—called *Chausa'th Kamh* from its sixty-four pillars.

<sup>4</sup> He was the brother of 'Asaf Khān Ja'far Beg, who held the post of *Wazarat* under Jahāngir. They were natives of Qazwin in Persia. 'Azam Khān, born 1575, was at different times governor of Dengal, Allahābād, Gujaraṭ, and Jaunpur—at the last of which he died, 1649. Conf. *Voy. de Olearius* (Paris, 1659) tom. II. pp. 148, 150.

Sieur de Mandelslo visited Gujurât, and while he gives a glowing picture of the pomp and wealth of 'Azam Khân, he testifies to the oppression by which it was supported and the coarse cruelty of the governor.'

Mirzâ 'Isa Tarkhân, 1642, with Muizul Mulk as minister.

Prince Muhammad Aurangzib, 1644, with the same minister.

Shaishta Khân,<sup>1</sup> 1647; and in 1648, Hâfiz Muhammad Nâsir as minister.

Prince Muhammad Dârah Shikoh, and in 1651, Mir Yahya as minister.

Shaista Khân, a second time, 1652.

Prince Muhammad Murâd Bakhsh, 1654, with Diânat Khân, and then Rahmat Khân as ministers.

Qâsim Khân, 1657.

Shâh Nawâz Khân Safâvi, father-in-law of Aurangzib, 1659.

Jaswantsingh of Jodhpur, 1659.

Mahâbat Khân, 1662. In his time Jean de Thevenot (1633-1667) visited Ahmadâbâd, which he describes as a league and a half in length, including the suburbs, which must have extended a good way to the south and south-east.

Bahâdur Khân Khân Jahân, 1668.

Jaswantsingh, a second time, 1671.

Muhammad Amin Khân Umdatul Mulk, 1674.

Muhammad Amin Khân, son of Muhammad Sayyid Mir Jumla, 1678,—died at Ahmadâbâd, 15th May 1682.

Mukhtar Khân, 1683.

Prince Muhammad 'Azam Shâh, 1686; but immediately after Kârtalab Khân.

Prince Muhammad, son of Aurangzib, a second time, 1703.

Ibrâhîm Khân, 1705,—'Abdu'l Hamid Khân acting till his arrival; the Marâṭhas attacked and defeated the Musalmâns at Ratanpur, and again at Bâhâ Piyârâ ford on the Narmadâ, and then retired.

Prince Muhammad Beḍâr Bakht, 1705, during whose time the country was much disturbed. Ibrâhîm Khân was then ordered to join his government, which he did in 1706.

Immediately after Aurangzib's death in 1707 the Marâṭhas under Bâlâji Viṣṇunâth invaded the province by way of Jhânuâ and Godnâ, where they were ineffectually opposed by Motâd Bakhsh, and advanced by Mundâ and Naḥiâd towards Ahmadâbâd, but were bought off by a tribute of Rs. 2,10,000, and withdrew. On prince Muhammad Mu'azzam Shâh acquiring the throne of Delhi as Bahâdur Shah in June 1707, Ibrâhîm Khân went to Delhi and resigned his office.

Ghâziu'd-din Khân Bahâdur Firuz Jang was appointed to succeed Ibrâhîm Khân in 1708; and in 1709 Shariat Khân, brother of 'Abdu'l Hamid Khân, was appointed minister in place of his brother who was made chief Qâzi. This viceroy died in 1710. Amânat Khân, governor of Surat, was appointed deputy viceroy in 1711 with the title of Shahâmat Khân. The Marâṭhas again invaded Gujurât when Shubâmat Khân

<sup>1</sup> *Voyage*, tom. II. pp. 147 ff.

<sup>2</sup> The builder of a large mosque on the banks of the Jainas, to the west of Allahâbâd fort, completed in A.H. 1056 (A.D. 1646) and destroyed in 1837. By his injustice while governor of Bengal, he provoked a war with Job Charnock. He died in 1694.

ordered Sayyid Ahmad Gilāni governor of Sorāṭh to aid him, and meeting the Marāṭhas at Aiklesvar he defeated them.

On the death of the emperor in 1712 Āsafu'd-daula Asad Khān Bahādur was appointed viceroy by his son Abu'l Faṭḥ Maghru'd-dīn Jahāndār Shāh, the new Sultān, with Muḥammad Khān Beg as deputy.

Shahāmat Khān was appointed viceroy in 1713, but early in 1714, he was superseded by—

Daud Khān Panni, in whose time many of the Hindu bankers of Ahmadābād were plundered by the Musalmāns.

In 1715 Mahārāja Ajitsingh of Mārwar was appointed viceroy, and his son Abhayasingh governor of Sorāṭh.

In 1716 Samsām'u'd-daula Basārat Jang Bahādur was the next viceroy, with Haidar Quli Khān as deputy.

In 1719 Mahārāja Ajitsingh was again made viceroy by the Sayyids who had set up the latest sultāns at Dehli. Pilaji Gaikwād now invaded Gujarāt and defeated the imperial troops, and soon after established himself at Songadh. The imperial power was now doomed. In 1720 Ajitsingh sent Anupsingh Bhandari as his deputy to Gujarāt.

In 1721 Haidar Quli Khān,—who together with Muḥammad Āmin and Sā'adat Khān had freed the emperor from the power of the Sayyids,—was appointed viceroy with the title of Muizu'd-daulah Haidar Quli Khān Bahādur Zafir Jang, and Māsum Quli Khān received the title of Sujā'at Khān Bahādur and the post of deputy viceroy. The people of Ahmadābād immediately attacked the palace of the vile Anupsingh in the Bhadr and he escaped with difficulty. Shujā'at Khān attacked the house of Nahar Khān who had been Ajitsingh's minister, but on his paying a lakh of rupees he was permitted to leave the city. Shujā'at Khān next interfered with the Bābis,—obliged Muḥammad Khān Bābi, governor of Kheda, to pay him Rs. 10,000; Qāsim 'Alī Khān, one of the viceroy's officers having been killed at Piṭhāpur, he burnt the town; after exacting tribute in Sorāṭh, he passed into Kachh, defeated the chief, and agreed to receive a tribute of 675,000 *mahmudis*—about three and a quarter lakhs of rupees. In 1722 Haidar Quli Khān took up the viceroyalty in person, but, showing signs of independence, he was quickly recalled.

Jumlatu'l Muluk Nizām'u'l Mulk was appointed to succeed Haidar Quli Khān, and directed Safdar Khān Bābi to act as his deputy and Hāmid Khān as minister with Momin Khān as governor of Surat. Pilaji Gaikwād defeated Momin Khān in 1723 and levied contributions on, and overran the country round Surat; Kāntāji Kadam Bānde also invaded the province on the Dohad side. This was the first time the Marāṭhas imposed a regular tribute in Gujarāt.

Mubārizu'l Mulk Sarbuland Khān Bahādur Dilāwar Jang was in 1723 appointed viceroy in place of the Nizām who had, without leave, gone to the Dekhan. He made Sujā'at Khān his deputy. He was at first opposed by Hāmid Khān the uncle and deputy of the Nizām, but the latter was obliged to withdraw to Dohad whence, in concert, with Kāntāji Kadam Bānde, at the instigation of the Nizām, he marched on Ahmadābād, defeated Shujā'at Khān at Mota Modrā six miles from the city, and slew him, 1724. The Marāṭhas now proceeded to collect their one fourth (*chauth*) and one tenth (*sardeshmukhi*) shares of the revenue. Hāmid Khān was practically independent but

being opposed by Rustam 'Ali Khān, governor of Surat, both parties engaged the aid of the Marāṭhas, and in the battle of Arīs, Hāmid Khān was defeated and the treacherous Marāṭhas on each side plundered the camps of their allies. They afterwards attacked and defeated Rustam 'Ali, and made an arrangement with Hāmid Khān. Mubārizz'n'l Mulk was then sent from Dehli with a strong force against both Hāmid Khān and the Marāṭhas, 1725. War continued and the country was plundered by all parties—the Peshwā contending with Pilāji Gaikwād for the Marāṭha influence in the country.

Abhayasinha Mahārāja of Jodhpur was appointed 54th viceroy in 1730, but was opposed and twice defeated by Mubārizz'n'l-Mulk and had to purchase the surrender by him of Ahmadābād. Abhayasinha effected the assassination of Pilāji Gaikwād at Dakor, and then recovered Baroda in 1732, and going to court the following year, left Ratnasingh Bhandāri as deputy viceroy. Rivalries and contests still harassed and desolated the country.

In 1737 Momin Khān was appointed fifty-fifth viceroy with the title of Najm'u'd-daulah Momin Khān Firuz Jang, and was quickly forced to ally himself with the Marāṭhas against the supporters of his predecessor, who was ostensibly re-appointed viceroy, while Momin Khān was secretly instructed to oppose him. On his partial success he was again appointed viceroy in 1738, and the contests were continued between him and the Marāṭhas till his death in 1743. After a time his son Muftākhir Khān was appointed viceroy with the title of Momin Khān but was powerless to act against his rivals. The following year Fakhr'u'd-daulah Fakhr'u'd-din Khān Shujā'at Jang Bahādur was installed in his room, and in 1748 Mahārāja Vakhatsingh, brother of Abhayasingh was appointed, but never took up the appointment. Taking advantage of the absence of the governor in the north, Raghmāthráv joined Dāmāji Gaikwād and marched on Ahmadābād, 1753, but Jawān Mard Khān, hearing of this, returned by forced marches and energetically defended the city: finally a treaty was arranged and the city given up: the suburbs were not repopulated, disorders increased, and the population was oppressed by the Marāṭhas, who also seized on the mosques and destroyed many of them for the materials with which to erect other buildings. In 1755 the rains were very heavy and many parts of the city walls fell down. Momin Khān learning of this marched from Kambhāt and retook the city. The Peshwā and Gaikwād combined to retake it and after a long siege Momin Khān capitulated, April, 1757. In 1760 the Marāṭha power was finally established in Gujarāt: the Gaikwād and Peshwā divided the revenues.

In 1780 a British force under General Goddard acting in aid of Faḡh Sing Gaikwād against the Peshwā took Ahmadābād by storm. It was restored to the Peshwā in 1783, but from about 1799 till 1814 the revenues were farmed by the Gaikwād. Then it was resumed by the Peshwā and his officers, anxious to collect money, extorted it by every process of oppression<sup>1</sup> for about three years. In 1817 it was ceded to the Gaikwād on an annual rental of four and a half lakhs of rupees, and shortly after it was arranged to hand it over to the British, partly in lieu of payment of a subsidiary force and partly for an exchange of territory near Baroda.

## CHAPTER II.

## MUHAMMADAN ARCHITECTURE IN BHAROCH.

THE first to draw attention to the Muhammadan Architecture of Gujarât was Mr. James Forbes in his *Oriental Memoirs*. He visited Ahmadâbâd in 1781, and with his account of its buildings he gave a drawing of the façade of the Jâmi' Masjid, showing the minarets, which were afterwards thrown down in 1819. In 1830, Capt. J. M. Grindlay published an aqua-tint view of the great tomb at Mahmudâbâd in his *Oriental Scenery*. Kinloch Forbes, in his *Ris Malî* (1856), gave a view of Sujâ'at Khân's mosque, but did not enter into any account of the Muhammadan buildings of Gujarât, and it was not till 1866 that any adequate representation was published. In that year was published, under the patronage of Seth Prenchaud Rayachaud, a quarto volume containing 120 photographs of the *Architecture of Ahmedabad*, with historical and architectural notes by Sir Theodore C. Hope and Mr. Jas. Fergusson—a volume which for the first time gave to the world some adequate idea of the wealth of artistic and architectural work there is at Ahmadâbâd. The work sold rapidly, but, as the photographs were produced by the silver printing process, they have long ago begun to fade, and copies have ceased to be procurable.<sup>1</sup>

But though Ahmadâbâd itself—from being so long the capital of the Musalmân power in Gujarât—contains more of their remains, the other large cities, such as Bharoch, Pholâ, Kambhât (Cambay), and the now deserted Châmpânir, present examples—many of them older—which, though less known, are quite as deserving of notice. It is those that are illustrated in the present volume.

Bharoch, on the Narmadâ, is one of the oldest cities in Western India.<sup>2</sup> In Sanskrit geography it is known as Bharukachchha, and to the Alexandrian Greeks as Barugaza—a great seaport with which, chiefly, the commerce of the Red Sea was carried on.<sup>3</sup> It is said to derive its name from an early colony of Brâhmins of the school of Bhṛigu who settled here, and are still represented by the Bhârgavas.

Probably early in the raids begun by 'Alau'd-din Khilji in 1297, the city of Bharoch fell into the hands of the conquerors. They destroyed the Hindu temples, and probably, as tradition relates, on the site of one of them, founded the Jâmi' Masjid, building it chiefly of the materials of the Hindu and Jaina shrines (see Plato II.). On the capture of Bharoch in 1803, some of the English troops were quartered in it, and it does not seem to have been used for worship since. It has now fallen into decay, is very dirty, and seems to be used only by Muhammadan mendicants as a rest house where they cook their food, with the result that the beautiful carved ceilings are so blackened with soot that it is

SHARCOH: INTERIOR OF THE JAXI MAS-ID.

scarcely possible to recognise the wonderful richness and variety of their patterns—probably unequalled in India.

The mosque is 126½ feet long inside and 52 feet from the front of the façade to the back wall (see plan on Plate III.). The roof is supported by forty-eight pillars, in two rows of twelve each in front and one at the back, with two broken rows of six each supporting the sides of three domes—the central one about 30 feet in diameter and the side ones about 23 feet each. There are also seven small domes, of about 8 feet diameter each, over the alternate spaces in the front aisle, and the same in the back one (elevation, Plate IV.). Along the walls are twenty-four pilasters, or attached shafts corresponding to the rows of pillars. The pillars, it will be observed, are not spaced equally apart, but the second and fourth spaces from each end are 8 feet between the centres of the pillars, the sixth or central pair are 13' 3", and all the others 10' 1½" between centres. In the rows across, too, the central pair are 12' 8" between centres, the back and front 10' 1½", and the intermediate spaces 9 feet. Thus the area to be covered by the central dome is 31' 9" by 28' 10", and those by the other two each 28' 10" by 24' 4"; the irregularity, however, is got over by the aid of the Hindû brackets, and by variations in the projections of the lintels forming the octagon from which each dome has to rise. The smaller spaces have been roofed, not quite symmetrically, by slabs and small domes, torn from some beautiful Jaina or Hindû temple; and when the stock of these was exhausted, plain sandstone slabs were resorted to for coverings to the remaining compartments.

Of these very remarkable roofs, the best are reproduced in the thirteen examples on Plates X. to XVI.,—six being from the smaller domes. The sections attached to several of the more complicated will make the relief more intelligible: description is quite impossible.

The pillars, as will appear from Plates II. and VII., have also been taken from Hindû temples. Inside, they are 14 feet 7 inches high, including the brackets; and a bold drip projects over the row in the front of the mosque. Two examples from the inner ones are given on Plate VII., which clearly indicate their origin: the animal figures of course have been mostly hewn out from the ornamentation.

In the back wall were six windows of perforated stone, now all destroyed, except fragments in two of them. In each end wall were also two, and a balcony window in addition, in the north end.

In the back wall, opposite each of the larger domes, are three *Mihrahs* or prayer *Qiblahs* of marble, the portions above the cornice, carved in a style quite different from what is usual in Gujarât mosques—perhaps a little too heavy for good taste, but not inappropriate. The central one differs slightly above from the other two in order to provide a proper panel for the usual inscription. It is represented, with plan and section in Plate VIII., and Plate IX. illustrates the beautiful and rich detail of the side *Mihrahs*: these drawings will explain their form and ornamentation better than any description. The inscription consists of usual formulae only, without a date. The recesses are semicircular and have a large rosette in the upper part,—above which is the carved half-dome that roofs in the apse.

The courtyard, now in a very dirty condition, had entrances in the north and south walls,—that on the south having a portico on a raised platform, supported by ten columns and two pilasters. The marble door from this into the court (Plate V.) is

59863

plainly from a Jaina temple, with the Jina as a cognizance still recognisable on the lintel, though most of the other figures are obliterated. Over the cornice are a few fragments of an Arabic inscription in high relief, but too much obliterated to be deciphered.<sup>1</sup> The general style of this door, of purely Hindû workmanship, when compared with many of the following plates representing similar work executed under Muhammanadan supervision, will help to show the continuity of the art of the Hindû, under the direction of his Muslim conquerors. It may even be remarked in the details of the *Mihrâbs*, Plates VIII. and IX.

Plate VI. gives the back, or street view of the masjid, showing that the floor of it is considerably above the street level, and that it has cellars beneath. The backs of the *mihrâbs* and the windows break the wall at the mosque level.

In the court in front is the indispensable tank for ablutions.

---

<sup>1</sup> If the last signs be the remainder of the figures 701, it might indicate the date of the mosque as A.D. 1302.

## CHAPTER III.

## CAMBAY, KAMBHĀYAT, OR KAMBHAT.

**K**AMBHĀT, as it is usually called by the natives, or more correctly Kambhāyat was known to Marco Polo (1290) as Cambaet, and in the seventeenth century as Cambaia or Cambaya, but in these later days is usually corrupted by Europeans into Cambay.

It is situated on the north side of the estuary of the Māhi river, 52 miles south of Ahmadābād and about 42 west of Barodā.<sup>1</sup> In Sanskrit inscriptions and legends it is called Stambhatīrtha, or "the pillar shrine," a name which has not been very satisfactorily accounted for, though it is not improbable that it may have been derived from the linga of Śiva worshipped here having had the name of Stambheśvara—the pillar god. In the Prakrits *Stambha* becomes *Kambha* or *Kambha*: hence the modern form of the name. In early times mention is made of a city, sometimes called Gajni—an important seaport at the mouth of the Māhi,<sup>2</sup> which was destroyed.

The new city was founded about three miles nearer the sea, it is said, and may possibly have arisen around the settlement of a colony of northern Brāhmins that was located on the present site by Mūlarāja, towards the close of the tenth century—the lands granted stretching for eight miles round a temple of Kumāri Devī.<sup>3</sup> The ancient city is now a small hamlet, about three miles to the north-west of the present town, and called Nāgara. It is spoken of as a flourishing place by Maṣ'ūdī who visited it in A.D. 915.<sup>4</sup> The city, famous for its sandals, was then governed by a Brāhmin in the name of the Balhara of Mankir, who was full of care for Musalman traders and other strangers. In the twelfth century, it was a well known naval station, with large trade, and protected by a fortress.<sup>5</sup> About that time the Pārsis are said to have incited the Hindus against the Sunnī Musalmans of the place, and in a riot destroyed their mosque. This coming to the ears of Siddharāja Jayasinhha, he supplied the means of rebuilding the mosque and minarets. This again was destroyed by some invader<sup>6</sup> probably about the beginning of the 13th century, and rebuilt by Sayyid Sharaf Tamin at his own expense, with four towers and gilded cupolas.<sup>7</sup>

In 1241, Vastupāla, the famous Jaina minister of Lavamprasāda and his son, was for some time governor of Kambhāt, and founded Jaina temples, Poshālās, and libraries.<sup>8</sup> And soon after this (cir. 1310) Marino Sanudo mentions it as one of the two chief ocean ports of India.<sup>9</sup>

<sup>8</sup> *Kirtī Kaumudī*, iv. 30 ff.

<sup>9</sup> Yule's *Marco Polo*, vol. II. p. 389.

It was captured in 1299<sup>1</sup> by the troops of 'Alāu'd-dīn; the city plundered; the temples desecrated and wrecked, and the people mercilessly slaughtered, blood flowing in torrents; thousands of maidens and children were carried off; and immenso booty in gold and silver, pearls, diamonds, rubies and emeralds, silks and rich cloths, was taken.<sup>2</sup>

Kambhāt was then placed under a governor and seems to have soon recovered its prosperity. From a tomb still to be seen, we learn that one Ikhtyarū'd-daulat wa'd-dīn was the treasurer, and died 6th September 1316. Ibn Batuta visited it about 1345 and speaks of it as a very fine city, remarkable for the elegance and solidity of its mosques, and houses built by wealthy foreign merchants, which formed a chief part of its population.<sup>3</sup> The Jāmi' Masjid had been finished twenty years before this on 5th January 1325.<sup>4</sup>

In his invasion to quell the insurrection in Gujarāt, in 1346, Kambhāt was plundered by the troops of Muḥammad Tughlaq; and in a second rebellion, in 1349, it was sacked by the insurgents and afterwards besieged by the Sultān. Under the independent kings of Gujarāt, it again recovered. Ahmad I. fostered its trade and enriched it, and, about the close of his reign Nicolo de Conti says it was a very noble city fourteen miles in circuit.<sup>5</sup> "It was still in high prosperity in the early part of the 16th century, abounding in commerce and luxury, and was one of the greatest Indian marts."<sup>6</sup>

In 1535 it was plundered by Humāyūn when in pursuit of Bahādur; and in 1538 it was taken by the Portuguese under Don João da Castro, who plundered it of immense booty and burnt the city. It was again plundered in 1573, in 1583, and in 1606. Still its trade was considerable in the time of Frederici in 1585.

In 1613 the English established a factory at Cambay, and in 1617 the Dutch did the same,<sup>7</sup> but closed it about 1670. In the eighteenth century it suffered the fate of most other towns in Gujarāt, at the hands of the Marāṭhas. In 1730 Mirzā Jā'far Najmū'd-daulah was appointed paymaster to the Mughal troops in Gujarāt, and governor of Khambhāyat, became nearly independent about three years later, and was appointed viceroy in 1737 as Najmū'd-daulah Momin Khān Bahādur Firūz Jang. He then appointed his son-in-law Zaimūl 'Abidīn Najm Khān governor of Khambhāyat, which post he held till his death in 1748, when Muftākhīr Khān, the son of Mirzā Jā'far, was confirmed in the post as Nur ad-dīn Muḥammad Khān Momin Khān (II.) Bahādur. He ruled till 1783, and his exactions and oppressions, especially his treatment of the Brāhmins, half emptied the city. He was succeeded by his adopted son Muḥammad Qulī, the illegitimate son of Zaimūl 'Abidīn Najm Khān, and who married Jognī Khāmm the illegitimate daughter of Momin Khān II. He ruled well for six years till

<sup>1</sup> The *Bombay Gazetteer*, vol. VI. p. 216, has A.D. 1304, but the *Tarjimatul Amsār* of Wassāf indicates the end of A.H. 698 or early in 699, i.e. A.D. 1299.

JAMI MASJID.

PLATE XVIII.

his death, and was succeeded in 1789 by his eldest son Fūṭhā 'Alī, who received from Dehli the title of Najm-ud-daula Momtāzu'l Mulk Momin Khān Bahādur Dilāwar Jang, Nawāb of Kambhāt, and by the treaty of Bassein (31st December 1802) all the Peshwā's rights in Gujarāt were ceded to the English, and soon after the Nawāb was allowed to farm the tribute for four years, an arrangement which has since continued. In October 1823 this Nawāb died and was succeeded by his brother Bande 'Alī Khān Momin Khān IV., who died in 1841, leaving the state to his younger brother Yāwar 'Alī Khān, but he waived his right in favour of his son Husain Yāwar Khān Momin Khān V.<sup>1</sup>

The population is now about 31,000, of whom 22 per cent. are Musulmans. The trade is gone, partly owing to the silting up of the north end of the gulf, and has been diverted to Surat. The only business is in the manufacture of agates, chiefly for the China market.

The Jāmi' Masjid of Kambhāt covers an area 212 feet from east to west by 252 from north to south; but the south end of this is occupied by a court and tomb, which reduces the length by 55 feet. The mosque itself measures, inside the walls, 189½ feet by 50: the open court in front of it is 134 feet long by 119 feet broad; and is surrounded by corridors, 28 feet deep at the sides and 30 feet in front (see Plates XVII. and XVIII.). The mosque extends across the ends of the side corridors, and its roof is supported by 100 pillars, 15½ feet high, exclusive of three at the ends of each corridor, and by 56 pilasters. They have evidently been reft from Hindu and Jaina shrines, and are arranged in two continuous rows of twenty-six each, at 21 and 42 feet from the back wall, leaving a passage between the front wall and first row; eight rows of six pillars each (with corresponding pilasters on both walls) cross the floor, thus dividing it into fourteen square areas, with the pillars so arranged that the lintels placed on them at once convert the spaces to be roofed into octagons, and these are readily covered with Hindā domes: the front aisle being flat roofed with slabs; but opposite the three principal entrances, this is carried up, as a sort of triforium, above the tops of the arches, and the supporting walls are of perforated stone. Each of the arched entrances is framed with bold mouldings. The jambs of the central one project about 2 feet and, as a substitute for minarets, are carried up to a height of nearly forty feet and crowned with pointed finials. The façade is thus raised in a higher central, and two side sections in such a way as entirely to masquerade the domes of the roof.

The areas at the end of the floor, in line with the corridors, have each two additional rows of pillars crossing the mosque, but these are interrupted at half the height to support two closed galleries for the women—which were also covered each by two domes,—one in front of the other.

The corridors round the court are roofed in precisely the same way, with a flat-roofed aisle in front, and behind is a series of twenty-one domes in line, the whole supported by 156 pillars and 70 pilasters in the back walls. These pillars are about 15 feet in height, giving the corridors a very light and airy character; and corresponding to each dome is a window through the back or outer wall.

<sup>1</sup> *Bombay Gazetteer*, vol. VI. pp. 221-223.

In the court is a small canopy supported by four pillars (Plate XVII.), and to the east is a very large cistern or perhaps two, covered over by two platforms with apertures for drawing water for the religious ablutions (*wuzû*) before prayers.<sup>1</sup> One of these platforms has a baldachin or canopy over part of the side of it, supported by ten pillars. An inscription on it states that the reservoir was repaired in 1621 by 'Alî bin-'Abdu'n-nabî al Baghdâdî. Such a tank is universal in the courts of large mosques being quite as essential as the *mihrâb*, and is simply a copy of what was generally prevalent in the early Christian basilicas or churches of the east. In the forecourt or *atrium* was the cistern or *cantarus*<sup>2</sup> under its canopy where those about to worship washed their hands and lips in token of purification. In the basilicas also, the arcades round the court afforded facilities for groups to walk and to converse, as in the mosques. The façades of the early churches, too, lay on the west side of the court, with their entrances to the east and the altar in the apse to the west.

In a *Sûrah* delivered at Mâdinâh, in the second year of the *Hijrah*, after Muhammad had broken with the Jews, the followers of Islâm were directed to face the Ka'bah at Makkah as their *Qiblah*.<sup>3</sup> This did not prevent their appropriating Christian basilicas and Jewish synagogues as masjids; and in most cases in India the façades are turned to the cardinal point rather than precisely at right angles to the rhumb-line of Makkah.<sup>4</sup>

In this mosque there are only three *Mihrâbs* or *qiblahs*—recesses in the west wall—copied and adapted by the early Musalmâns from the Christian churches which they first seized and used as places of worship. For this recess represents the *absis* or apse; only Muhammadans using no table or altar the apse could be narrowed in structures built to suit the ceremonial of their own creed, and multiplied by subordinate *Mihrâbs*, until in later times there came to be one opposite each of the larger floor areas, that is for each large dome. Here however they correspond only to the three larger entrances. They are much plainer than those of Ahmadâbâd, semicircular in plan; with a pointed arch resting on two side pillars, set within a marble architrave or frame of two flat members, carved with simple floral patterns, the outer one having a sentence from the *Qur'ân* above, and another on the lintel over it.<sup>5</sup> This is enclosed by two marble pilasters supporting a projecting cornice over which are five blocks carved on the tops like the roofs of Hindû temples and crowned by urns. See Plate XX., for the central *Mihrâb*.

Behind each *Mihrâb*, outside, is a semicircular buttress—the central one being somewhat larger than the others. They stand on the podium or basement of the

<sup>1</sup> These consist of cleansing the teeth, washing the hands, rinsing the mouth and nostrils, throwing water on the forehead, and washing the face and the feet,—all three times.—*Quawan-i-Islâm*, pp. 72, 73.

<sup>2</sup> Conf. Baldwin Brown's *School to Cathedral*, p. 116; Müller, *Archæol. d. Kunst*, § 230.

<sup>3</sup> *Qur'ân*, Sûrah II, v. 139, 145. The first *Qiblah* had been towards Jerusalem, and Muhammad built the first masjid with the *Mihrâb* in that direction.

<sup>4</sup> The Muhammadans, Hyde tells us, have tables for determining this position called جدول التوجه Hyfle, *Hist. Rel. ect. Pers.*, pp. 8, 9, 126. The strictly correct angle with the meridian at Kanbhâyat would be N. 85° 36½' W. Only on a line running north-east through Sirohi is the direction due west. At Peshâwar the direction is S. 73° 50' W.; at Calcutta N. 82° 1' W., and at Cape Cemorin, N. 65° 8' W. The door of the Ka'aba itself is on the east face.

<sup>5</sup> On the central *Mihrâb* after the Bismillâh is Sûrah IX, v. 18; over the south one is S. III, v. 16, and part of 17; and over the north one, S. XXXIV, v. 36.

Scale of 0 1 2 3 4 5 feet.

mosque, and are ornamented with carved string-courses, and capped in a manner peculiarly Hindû in conception. The central one is given on Plate XXI, fig. 1.

Corresponding to each of the six domes (or pairs of domes) for which there is not a *Mihrab*, there is a perforated window in the back wall, some of them now much destroyed, but they are of quite a peculiar pattern, and one of them with the string course above it is given in Plate XXI. On each side of these but higher up in the wall are other perforated windows: in all there are eight in the upper tier in the mosque proper and four in the *zanâna* galleries; also one in each end wall.

The *Mimbar* or pulpit occupies the usual position, to the right of the principal *mihrab*, and, like most of those not altered by 'Alangir, it has eight steps, and a small marble baldachin above. For the Mullâ or Khâtib to enter direct to the pulpit there is a door to the right of it in the back wall which passes on to the basement outside, from which steps lead down to the street.

Along the south side of the mosque area is another, measuring inside 204 feet by 49, with the main entrance in the centre of the south face. This leads into a large domed tomb 39 feet in diameter, with an outer row of pillars on the east and west sides (Pl. XXII.). In it are two tombs—of the builder and his wife—to be noticed presently (Pl. XXIII.). In the towers on each side of the gate are the stairs giving access to the roof: there is likewise a stair in the south wall with the entrance from outside. The roof however of this large and very striking dome has fallen in, and it is greatly to be regretted that no effort has been made to rebuild it. The west end of this court contains the private mosque belonging to the tomb.<sup>1</sup> It is simply a continuation of the Jâmi' Masjid through the partition wall, and consists of two pairs of domes, with the narrow front aisle returned down the left end. Behind the domes on the right is the *mihrab*, and on the right is a *zanâna* gallery, with perforated screens round it,—partly ruined; the stone screens in the large mosque have almost disappeared.

The rest of this court is open, and the east wall is now partly destroyed. Doors lead from the tomb, and from the mosque into the large Masjid.

The two tombs in the area, under the great dome, have been sadly damaged by its fall. They were of white marble elaborately carved and that of the man is represented, as now partially rebuilt, in Plates XXIII. and XXIV. The end slab is beautifully engraved: round the outer margin is the first twelve and a half verses of the famous *Sûrah XXXVI*, read to dying Muhammadans in their last agony. In the upper part of this slab, and on an inner border is *Sûrah II*, v. 256,—“the Throne-verse,” one of the most admired passages in the *Qur'ân*; and on the base of this triangle, on the left side, is the conclusion of verse 151 of *Sûrah II*, “Verily we are God's and to Him shall we return,”—words constantly used by pious Muslims when in any trouble and especially in the presence of death; and on the right side, the end of *Sûrah XXXVI*, v. 52,—“This is what the God of mercy promised: and the Apostles spake the truth.” In the enclosed area is written in beautiful characters, with stems elongated to fill the space, the larger *Kalimah* or creed,—“I bear witness that there is no God but Allah, and that Muhammad is his worshipper and his messenger.” Below this, and separated from it by an ornamented band, is an

<sup>1</sup> Here again we have an analogy with Christian and even Jewish custom, for the synagogues were often connected with the tombs of the founders, or of local worthies; see the *Itinerary of Benjamin of Tudela* (Ed. Asher), pp. 90 ff.; B. Brown's *Schola to Cath.*, p. 9.

area having on its right and left borders *Sûrah* III, vv. 16 and 17,<sup>1</sup> which contain a sort of paraphrase of the creed; and at the top of the central panel, vv. 163-165<sup>2</sup> of the same *Sûrah*, and under it the Epitaph, which runs thus:—

"This is the tomb of the feeble worshipper, blessed martyr, received into mercy, chief of chiefs, prince of Vazirs, celebrated in Arabia and Persia, pillar of the state and of religion, 'Umar bin-Ahmad al Kâzarânî<sup>3</sup> who bore the title of Zaur-al Malik,—may Allah the most high overwhelm him with mercy, pardon, and the approbation of Allah in the mansion of paradise. He departed to the compassion of Allah, be he exalted, on Wednesday the ninth Safar, in the year seven hundred and thirty-four" (*i.e.*, 21st October 1333).

On the west side of the tomb the upper band contains *Sûrah* XXXVI, vv. 65-71; and the lower vv. 72-79 inclusive of the same.

The ornamentation of this tomb can best be judged of from the representation on the plates.

The other tomb was apparently that of his daughter, but the inscription upon it has been severely injured, by the falling dome: it reads,—

"This is the tomb of one received into mercy, the pardoned, the boast of women, the crown of treasures, Bibi Fâ'imah who had performed the pilgrimage to Karbalâ. . . . the deceased Husain, the wife . . . . 'Umar . . . . departed to the compassion of Allah on the eleventh Shavvâl in the year seven hundred and eighty-three" (30th December 1381). Over this epitaph are the *Tahlîl* or first words of the *Kalimâh* "No deity but God" and *Sûrah* I.V, vv. 26, 27. Along the sides of this tablet is "the throne-verse" (*S.* II, 256); and on other bands are the *Surat al Wâhîdat* (*S.* I.) and the words "O Allah! Pardon this deceased woman, and illuminate her tomb with the light of thy compassion, O most merciful of the merciful!"; on another band is inscribed *Sûrah* III, v. 16, and part of v. 17; and on another, v. 182.

On the east side of the enclosure is a portico supported on eight pillars, with two more in advance at the entrance; they have evidently been taken from some Jaina or Hindû temple (see Plate XIX.). Over this entrance is an Arabic inscription beginning with the usual *Bismillah*, then *Sûrah* LXXII, v. 18, "It is unto God that mosques are set apart; call not then on any other therein with God," to which is added the traditional saying of the prophet, from the *Hadith*, "for him who builds a mosque for Allah, Allah will build a house in paradise," and then the statement,—

"This is a *wagf* (bequest) and dedication to Allah. This blessed Jâmi' masjid and place for the congregation has all been built from the private property (*bestowed*) by the grace and bounty of Allah, and offered to Him; may He be exalted! in the reign of the learned and righteous Sulţan Muhammad Shâh, son of Tughlaq Shâh the Sulţan,—may Allah perpetuate his kingdom and his sovereignty!—by the feeble worshipper who hopes for the mercy of Allah—be He exalted!—and for His grace,—by Muhammad al Bâtinârî (?)—may Allah grant his wishes and guide him! On the eighteenth of Muharram, in the year seven hundred and twenty-five" (5th January 1325).

<sup>1</sup> Vv. 18, 19, in Sale's version.

<sup>2</sup> Vv. 170-172 in Sale. See Lane's *Selections*, p. 30.

<sup>3</sup> Kâzarân is in the province of Fârs, 50 miles west of Shirâz: lat. 20° 35' N., long. 51° 47' E.

<sup>4</sup> Owing to the absence of the diacritical points this name may be read in several other ways.

CAMBAY: TOMB OF 'UNAR BIN AHMAD AL KAZARUNI.

1. FRONT ELEVATION.

Scale of 1/2" = 6' 3 feet.

2. BACK ELEVATION.

On another tablet belonging to an old mosque, we have after the *Bismillah*—"This mosque was built by a servant of the majesty of sovereignty Sultān Fīrūz" . . . . And then in six verses of rather poor Persian poetry,—

"In the reign<sup>1</sup> of (*this*) Sultān, Zafar Khān Gustarī<sup>2</sup>(?) the architect

Built this mosque upright like royalty (*sultānī*);

And in the year seven hundred seventy-five from the Hijrah of Muḥammad (1374),

This mosque has been repaired for the worship of God.

May God have mercy upon the worshipper who in this mosque

Utters from soul and heart a prayer for the architect."

In and around the town are several old tombs of somewhat similar pattern to that of 'Umar al Kāzarūnī; one is of Ikhtyār-ad-daulah wa'd-dīn, treasurer of the city of Khambāit, dated 17th Junādā II., 716 A.H. (6th September 1316). About a mile west of the town is that of Khwājah Khidh'r built in 771 (A.D. 1369-70). The tomb of Hājji Yūsuf son of Sayyid Aḥmad, son of Muḥammad, son of 'Isī, son of 'Abd-as-Sallām, son of Aḥmad-al Hājab-al Quaraishī, 13th Rabī' in the year 814 (or 6th August 1411). And that of Fakhr-ad-daulah wa'd-dīn Abū Bakr son of Hasan, son of Muḥammad son of Hasan, son of 'Isī-al-Quaraishī al-Hakīm, 17th Šafar year 818 of the Hijrah (29th April 1415).

On a mosque, in ruins, at the back of Khwāja Khidh'r's tomb is an inscription of seven Persian distichs in very elegant caligraphy, dated 1219 (A.D. 1804).<sup>3</sup>

<sup>1</sup> 1351-1388.

<sup>2</sup> Or al Shustarī.

## CHAPTER IV.

## DHOLKĀ.

**D**HOLKĀ or Pholakā is the head-quarters of a tāluka of the same name in the Ahmedābād district, and has a population of about 16,000, of whom about one-third are Muhammadans. It lies about 23 miles to the south-west of Ahmedābād in lat.  $22^{\circ} 44'$  N. long.  $72^{\circ} 18'$  E.<sup>1</sup> It is one of the numerous sites claimed for the Virāṭa where the Pāṇḍavas lived in disguise. In the twelfth century it was called Dhavalakkaka,<sup>2</sup>—it is said from Dhavala the father of Arjorāja of the Vāghela clan, from whom the last Hindū dynasty of Gujurāt descended. At the end of the previous century, however, it had been adorned by Mainaladevi, the mother of Siddharāja, with a fine lake which still exists; and, as Idrisi mentions it under the name of Dhulakā as a chief trading town in his time,<sup>3</sup> it is not improbable that it bore the name long before the time of Dhavala the Vāghela.

It was apparently one of the places at which Vastupāla and his brother Tejahpāla built Jain temples in the early half of the thirteenth century, when, under Viradhavala, it was a place of great wealth and importance. Under the Musalmāns it was the quarters of a local governor, and the remains of its mosques, especially of the fourteenth century, show that it was regarded as a place of no small consideration.<sup>4</sup> On the conquest of Gujurāt by Akbar in 1573 he gave Dholakā and Dhandluka in charge to Sayyid Hāmidi-Bukhārī, and next year Wazīr Khān was appointed to the post; and it is often mentioned in the subsequent struggles.<sup>5</sup> 55963

## HILĀL KHĀN QĀZĪ'S MOSQUE.

The oldest mosque at Dholkā is most probably that known as Bilāl (or perhaps rather Hilāl) Khān Qāzī's, erected in 1333. But who Hilāl Khān, or Mofakhr al Umra Muqarrab ad-daulat wa'l-dīn Hilāl—as he is styled in an inscription,—was, we do not know. (See Plates XXV. and XXVI.)

Inside the walls it measures 142 feet from north to south, by 147;—the mosque occupying the west side of this area, is 35 feet deep inside the walls, leaving 106 feet for the breadth of the court. It consists of five bays covered by five low, plain, conical domes and has as many *mihrābs*. The central dome is raised nearly 7 feet above the others by short pillars, having the interspaces filled in with tracery, and the rings of this dome—the section of which is conical—are carved with lanceolate leaves. The others are formed of plain mouldings in concentric circles. Above the first pillars within the entrances, screens of perforated stone are also carried up, as in the Kambhāt mosque, nearly to the height of the façade which hides the three central domes. The end domes are on the wings, which are lower and have only a

<sup>1</sup> The *Imperial Gazetteer* places it on the Sābarmati, from which it is several miles distant.

DHOLKA: SECTION OF THE MASJID OF HILAL KHAN QAZI.

grated window in the façade of each. The pillars are all plain, and of the usual Muhammadan type, consisting of a shorter or stilted pillar set on the capital of a longer one, the construction being the same as in Ahmad Shâh's earliest mosque at Ahmadâbâd. The bases are disproportionately high for the lower shaft. (See Plates XXV., XXVII., and XXVIII.)

The north end is screened off inside, for the women, by a perforated partition from back to front, between the first transverse line of pillars from the north wall. The patterns in the squares of this screen are each a separate device. The floor of the women's hall is raised by  $2\frac{1}{4}$  feet above that of the mosque, and it has a separate entrance from without and a window in the north wall; it has likewise its own *mihrâb* on the level of the raised floor of the area. This arrangement takes the place of the *zanâna* gallery, and is found also in the masjid known as Sayyid 'Âlam ad-dîn's (or 'Âlam Chishti's) in the Khânpur division of Ahmadâbâd. The north arch of the façade, opening from this bay into the court, is also closed by a perforated screen.

The south dome has fallen, carrying parts of the back and end walls with it; and, throughout the whole building, many of the lintels are broken and propped up by brick piers. These are indicated on the plan. Plate XXVI.

Each dome stands on eight pillars, and, with the four completing the square in each case, this makes sixty free standing columns in all,—torn from Hindû Temples,—besides the pilasters that correspond. High up in the façade wall, to the right and left of the three archways, and also along the back wall, are formed small ventilators, cut horizontally into the front and then sloping down behind the line of the architrave over the pillars. The mosque being so open they are hardly required for ventilation, and they admit no light. The *Mihrâbs* are of marble, carefully sculptured, and indicate a sort of combination of the Muhammadan structural arch and the Hindû or merely ornamental one. The Central *Mihrâb* is given in detail on Plate XXIX. Only the three *Mihrâbs* of the central part of the mosque have buttresses behind them on the back wall.

The roof just in front of the central *Mihrâb* is one of those small carved domes in which the courses are carried round in a spiral. We shall find other examples at Ahmadâbâd. As at Bharoch, so also here, the beautiful carved roof panels have been taken from native temples and placed in the smaller square compartments in the ceilings. Two examples of these panels from Dholkâ are represented on Plates XXXI. and XXXII.

The marble pulpit or *Mimbar* is still in pretty good preservation and is one of the finest in India. This, with the small platform in front, is represented on Plate XXX. The face of the rise of every step is sculptured in a different pattern. The sides of the stair are covered with little squares of panelling of geometric designs in deep relief. At the sides of the pulpit platform is a little parapet, sloping outwards, and beautifully carved with little pillars, between which the stone is cut away right through. It is surmounted by a neat canopy standing out, separate from the wall, with a pyramidal roof of purely Hindû design, formed by a succession of sharply cut horizontal mouldings, and supported by four pillars with heavy bracket capitals upheld by struts. The ceiling of this canopy is flat and ornamented with lines of little inverted cup-shaped carvings. The variety of the patterns in the panels on the sides of the structure and on the front of the steps is only limited by the number of spaces to be filled by them.

There are no minārs proper, but two little turrets stand on the front wall,—one on each side of the central arch,—which are quite unlike any others employed in similar circumstances elsewhere: they stand just behind the battlementing of the façade, and are  $17\frac{1}{2}$  feet high with shafts 2' 3" in diameter. See Plate XXVII, fig. 2.

The two pillars inside the south arch of the façade, have a moulded arch thrown in between them and resting on the bracket capitals of the lower sections of the pillars. Its apex supports the centre of the cross beam above the upper sections of these columns; it has not been inserted to remedy a crack, but is part of the original structure.

The stair to the roof ascends from a doorway in the south wall of the court, and on entering the front wall of the mosque, it turns at right angles and comes out on the roof under a small canopy.

In the north-east corner of the court area there is a tank and animals near it. Little pavilions crown the four corners of the walls, supported on four pillars; and there are perforated windows through the walls.

The court is entered by doors on the south and east. The entrance on the south has a porch on two advanced pillars, and is led up to by a flight of steps. That on the east is the main entrance and has a fine portico supported on thirty-two pillars, with advanced porches on each of the three exposed sides, to which flights of steps lead up. It is roofed by a Hindū dome raised on the pillars of an upper storey with perforated screens between. This is surrounded by an outer carved parapet following the line of the outer pillars and projections of the floor level. (See Plate XXXIV.)

The door from this porch into the court, given on Plate XXXIII, when compared with that at the north end of the court of the Tānka or old Jāmi' Masjid (Plate XXI), which is purely Hindū, will indicate the source of the design.

The inscriptions which at one time filled the panels over the *Mihrābs* have all disappeared, but built into a brick wall now supporting a broken lintel, immediately in front of the central *Mihrāb*, is an inscribed slab, which, though it hardly seems to fit any of the spaces left, and is carved with incised letters, apparently belongs to the original structure. It runs,—“In the name of Allah the Merciful the Clement. Allah, be he exalted,—has said ‘Verily the mosques belong to Allah, therefore do ye not invoke any one with Allah.’ The edifice of this mosque was—during the reign of His Majesty the Sulṭān Abu'l Mujaḥad Muḥammad, bin Toghlaq Shāh, and in the time of Malik-ul-Mulūk-ush-Sharq Rukn-ud-Daulat wa'd-din-Fattāh Sirdār-yekdilkhāṣ,—constructed by Mufakhr-al Umra Muqarrab-ud-Daulat wa'd-din Hilāl Molley (or Maleki); the architect being the slave 'Abd-al-Karim Laṭif. Dated the twenty-seventh of the month Dhilḥijjah, in the year seven hundred and thirty-three” [8th September 1333].

#### THE TĀKA OR TĀNKA MASJID.

Next, in point of age to Hilāl Khān Qāzi's mosque, probably comes that known as the Tāka or Tānka Masjid,—so called from a water tank which is close to the east entrance. It was the Jāmi' Masjid or chief mosque of Dholkā, however, previous to the erection, in the following century, of what is now used as the Jāmi' Masjid.

About the date of this one, A.D. 1361, there is no room for doubt, for over the *Mihrābs*, we have it thrice recorded; first in Arabic prose, and twice in Persian verse. Over the central *Mihrāb*, after some quotations from the *Qur'ān*,<sup>1</sup> the Arabic inscription goes on,—

“This noble Jāmi' Masjid was built in the reign of the very great Sultān and honoured Qaharmān,<sup>2</sup> shadow of Allah upon earth, vivifier of the *sunnah* and *farz*,<sup>3</sup> confider in the aid of the Merciful; Firūz Shāh the Sultān,—may Allah perpetuate his kingdom and make everlasting his monarchy,—from the special property of His Majesty the king,—lord of the sword and of the pen, protector of (*divine*) knowledge, and of (*secular*) knowledge, by Mufakhr-al-Khowāṣ ṣhkh-yār-ad-Daulat wa'd-din Mufarrāh-as-sultāni,—may his special dignity be permanent, and may the shadow of the (*royal*) portals be extended towards him. And this was on the tenth Rabi'ul-ākhir, in the year seven hundred and sixty-two” (17th Feb. 1361).

Over one of the side *Mihrābs*, is, in Persian verse, the inscription:—

“In the reign of Firūz Shāh, another Alexander,  
Mufarrāh-Mufakhr al-Khowāṣ Khāṣ-al-Khāṣ Sultāni  
Built the pure Jāmi' mosque in Dholqah  
Of his own special private property by the divine favour of Allah.  
Upon amber bricks there are roses from musk of Tātāry.<sup>4</sup>  
The mortar is of pure camphor.<sup>5</sup> Bravo to the fortunate builder!  
The meadow (*floor*) is like paradise, and men walk thereon.  
The five stated prayers<sup>6</sup> are there performed by Maṣ'ud Ṭāyi.  
The glorious date at its completion of hard marble was—  
Of the Hijrat seven hundred and sixty-two, by divine grace.  
Benediction be upon this building of his till the day of resurrection  
May all difficulties be repelled and general prosperity ensue.”

The other is much to the same effect bringing in “the tenth of the month Rabi'ul-ākhir,” and the year 762, which is repeated three times.”

This old Jāmi Masjid or mosque of Mufakhr Mufarrāh occupies an area 160 ft. 8 in. by 69 feet within the walls, and has a court of only 36 feet in width by 134 in length. It has a double corridor round three sides of this, with the mosque on the west, constructed of three rows of pillars taken from Hindū temples, arranged nearly equidistantly (see Plates XXXV. and XXXVI.). These pillars are further illustrated by the examples given on Plates XXXVII. and XXXVIII. The roofing of the Hindū temples has also been appropriated as at Bhuroch, and two examples more of the carved ceilings are given to scale on Plates XXXIX. and XL., with sections to show the depth of the cuttings in them.

The *Mihrābs* are unusually deep recesses, receding about 4 feet from the inner line of the walls, and having semi-circular buttresses behind, into which they enter. An area

<sup>1</sup> *Surah*, III. v. 16, 17.

<sup>2</sup> From *al-Qahhār*—“the dominant,”—one of the 99 names of God.

<sup>3</sup> The *sunnat* are the number of *rak'ats*, or forms of daily prayers in use, as being founded on the practice of Muḥammad; the *farz* are those said to be enjoined by God in the *Qur'an*.

<sup>4</sup> معطر الخواص إعمار الدولة والدين معطر الطلوع

<sup>5</sup> i.e., Yellow tessellated pavement with black ornamentations.

<sup>6</sup> Of snowy whiteness.

<sup>7</sup> The five periods of prayer are called in Hindustani—Fajr, Zohar, 'Asur, Maghrib, and 'Aysha-ki-namāz.

<sup>8</sup> For the texts of these inscriptions, see my *Lists of Antiq. Remains in the Bombay Presidency*, pp. 278–281.

about 18 feet square is cut off by perforated screen work at the north end for the women, having a separate door close to the north wall. In this apartment is a small *Mihrāb* with an inscription over it, bearing the usual formula from the *Qur'ān* (*Sūrah* LXXII, v. 18). "It is unto Allah that the mosques are set apart; call not then on any other therein with Allah."

In the court a modern wooden erection extends across from the front wall to the mosque and is about 4½ feet wide supported on six rows of wooden pillars. The court, as in the case of Hilāl Khān's, is entered by three doors, on the east, north, and south—each with a small domed porch,—that on the east being the largest on eight pillars and two pilasters. There can be no doubt that this also was taken from some Hindū or Jaina temple, together with the doorway; and the figure sculptures on them were merely defaced. The dome is an elegant one, though it is now repaired with but ill applied brick supports. A section of it, showing the door is given on Plate XLIII. and one of the pillars supporting it on Plate XXXVII, fig. 1. The ornamented parapet round the porch and the door at the north entrance are of similar origin, and are characteristic specimens of Hindū work of the kind in the thirteenth century. The parapet wall of the porch is given on Plate XLII. The doorway at this end, which should be compared with that at the entrance to Hilāl Khān's mosque, is also given to scale on Plate XLI.

#### ALIF KHĀN'S MOSQUE, DHOLKĀ.

Of the other two large mosques at Dholkā, the great brick masjid of Alif Khān Bhūlkāi—known as the Khān-ki Masjid—is probably the older by about thirty years. From its massive style we should be inclined to date it soon after the Raūzah of Darya Khān at Ahmadabad or early in the reign of Mahmud Shāh Bigarah. This Alif Khān Bhūlkāi was one of three favourite companions of that Sultān's youth, who were afterwards advanced by him to the title of Khān and commands of 5,000. The *Mirāt-i-Sikandarī* says,<sup>1</sup> Alif Khān "built the great masjid in the vicinity of the town of Dholqah, to the west of the fort. Travellers in many lands are agreed that they have in no country seen so fine a mosque of brick."

There are no inscriptions left to guide us, but there seems no reason to doubt that this statement can only refer to this striking brick monument (Plates XLIV., XLV.). The original façade has long ago fallen, but it was flanked by two square solid towers, the total length over which was 204½ feet, while the mosque measured inside 150½ by 42 feet. It is divided into three square halls by two massive walls 12 ft. 3 in. thick, each perforated by a large central and two smaller side arches. The front and back walls are only 6 ft. 3 in. thick, and the former is similarly pierced by a larger central and two side doors, while in the back, the *mihrāb* occupies the centre and has a perforated window on each side of it. The end walls have also a recess and two windows each. At a height of about 23 feet, a thin plain string-course runs along the walls and is surmounted by eight arches—four of them with groins across the corners, so as to reduce the square to an octagon—the four on the sides enclosing perforated windows through the outer walls and plain openings through the inner ones. These arches, with groined segments

between their haunches, reduce the space, at a height of 38 feet from the floor, to a sixteen-sided polygon, with a plain stepped moulding laid over the cusps to form the base of the dome, which rises to a height of 63 feet from the floor inside.

The *mihrābs* are deep, being square recesses inside and domed over, with plain façades and doorway arches. In the central hall, on the north side of the *mihrāb*, is the *minbar* or pulpit ascended by nine steps, with an additional plinth for the platform. Over this is a canopy, supported by two advanced piers and two pilasters carrying arches at the sides. The roof is surrounded by a crown of *kānḡras*, within which a short drum supports the dome and finial. In front of the pulpit steps is the usual low platform. On the four walls of this room, just under the first string-course, is a belt of boarding about 18 inches deep, and double that over the *mihrāb*. This was once painted with texts from the *Qur'ān*, which have now almost disappeared. See Plate XLV.

On each side of the *Mihrābs* is a small arched window, rising to a height of about 9 feet from the sill or floor, which has been filled in with very fine perforated stone tracery (see Plate XLVIII.).

The whole structure is of brick, but the plaster-work ornament is of great merit, and sufficient of it is still left to illustrate the patterns and the distribution of it. Outside, behind the *mihrābs*, are three short half-octagon buttresses against the back-wall, into which the *mihrābs* partly enter. The plaster on the side panels and sloping roofs of these is most elaborately ornamented. The central buttress is given to scale on Plate XLVIII.

The entrance doors and windows have also had exquisitely wrought frontispieces in plaster, which are still partially preserved, and the character and condition of which will be best explained by the representation of the north entrance given on Plate XLVII.

At each end of the façade is a solid square tower, behind which—at the ends of the mosque—are broad stairs leading to the roof, and narrower ones ascend from the terrace of the mosque to the top of the towers themselves—a total height of about 79 feet. On them are raised small square canopies for the *mu'azzin*, about 12 feet square at the base and domed over. The towers project 21 feet from the front wall of the mosque, on their inner sides showing the spring of an arch; and cross walls have evidently advanced from the front to meet a great screen with three lofty arches which joined these towers and formed the original façade of the mosque, while the inner wall was carried up to almost double its present height. This wall, however, and all three arches in front with the two cross walls have fallen and disappeared. The whole formed a screen to the domes and hid them from view in front. Under the shelter of the central arch there was a pulpit or *minbar*, from which addresses could be delivered to crowds in the front court on special occasions. Whether the back wall was pierced with openings above the level of the mosque roof or not, we have no evidence now; but there can be no hesitation about restoring the general features of this noble façade as it must have appeared when complete. See Plate XLVI, which presents this in outline.

At a distance of 303 ft. 5 in. from the present front wall is the entrance portico; so that the court must have been 232½ feet across. The entrance is 20 feet square inside, with arched doorways on each face, the outer one decorated above, like those

of the mosque, with exquisite plaster work. In advance of this again, are the ruined piers of a low bridge, that once spanned the monsoon stream which passes here.

Both to the north and south of the mosque, at distances of 63 and 40 yards from it, and near the great Malāv tank, is a beautiful tomb, supported by forty pillars in concentric squares, with an advanced pair on each face—forming small porches. The central square is carried to a higher level and supports the principal dome. The tomb to the north—which is most nearly in line with the mosque—has an extreme length, including the porches, of 61 ft. 10 in., and the other of 60 ft. 2 in.

This mosque of Alif Khān is now quite deserted: half the plaster has peeled off, and it is infested by bees, bats, and swallows. In the north hall a great crack, 6 to 8 inches wide, runs up the middle of the north wall, across the dome, and down the south-east corner to within 15 feet of the floor. Another fissure starts from the crown of the central arch on the south side of the room and runs down the wall. In the centre hall, a crack runs up its south side wall and across the dome, turning down the north-east corner through the upper arch. In both corners of the south side are also large cracks running up into the dome. And in the south hall, one runs up the north-east corner into the dome and circles partly round it: in the north-west corner is another, and smaller ones pass through the upper windows in the front and back walls.

#### THE JĀMI' MASJID AT DHOLKĀ.

The Jāmi' Masjid<sup>1</sup> bears some resemblance to Hilāl Khān Qāzi's, but the style marks it out as belonging to the latter half of the fifteenth century, probably not later than 1485, and a comparison with some of the mosques at Aḥmadābād of about that date will show many points of agreement. (See Plates XLIX. and L.)

It consists of a central body with three large arched entrances and three domes,—extended by two wings, somewhat lower and having one dome each. The interior measures 100 ft. 8 in. by 33 ft. 6 in., and each dome stands on twelve plain Muḥammadan pillars of the "broken-square" type; the shafts are not stilted as in the older mosques; but the two inside the principal entrance differ from the others—being, in plan, stars of eight points and higher than any of the rest. The panel in the roof just in front of these two pillars is carefully carved somewhat after the style of the similar one in the great masjid at Chāmpānir erected very soon after this one. (See Plate LXII.)

The other ten pillars round the central area, together with the pilaster on each side of the entrance, support a deep frieze forming a sort of gallery above, which extends back and laterally to the next lines of pillars which support a corresponding series above, rising to a total height of 25 feet from the floor. The inner twelve (including the two higher ones in front) support the central dome, and the outer rows bear the roof of the gallery, and being open between, admit air and a certain amount of light. The side domes rest on lintels only 13 feet from the floor, but with a deep carved frieze over the lintels. The aisle in front however is carried

<sup>1</sup> Masjid (pl. masājid) is "a place of adoration" (from *ʿajdah*—"to bend, bow, adore"). From it our word "mosque" has been corrupted. Jāmi' means "assembling" (*jamaʿ*—"collected"), and is applied to the principal or cathedral masjid of a city—otherwise called Jāmi'-i-Masjid, and "Friday Mosque."

up, by means of a carved frieze and originally a perforated screen above it, to the height of the base of the central domes. This allowed the side entrances to be made fully 30 feet high to the cusps.

The wings have not this raised roof in front, and consequently the front walls were not required to be carried higher than 17 feet, if the domes behind were not to be hidden. Each wing has only a small entrance door in front.

In the back wall are six windows that have been filled with perforated work. There are also three in each of the end walls but all of them have been more or less broken. The central and larger one in the south end is represented to scale on Plate LI.

The upper storeys of the two minars have fallen. They stand between the main entrance and the two side ones, and still rise in three storeys to a height of 37 feet, having projecting eaves supported by brackets at the top of each storey—the second being in line with the weather board of the façade, which projects about 20 inches from the wall, and is supported by neatly wrought corbels. The upper portions have fallen. In line with the first weather moulding, which is at the same level as the top of the wings, a broad carved string-course is carried across the façades.

The plan of the minars is the well known one of the shrines of Hindû temples,—namely, a square with narrower facets laid upon it, so as to "step off" all corners by a series of vertical rebatements.<sup>1</sup> They have numerous horizontal mouldings; and on each of the three faces in the first and second storeys are niches, in imitation of those for images on the back and side walls of Hindû shrines, but which in mosques are always ornamented with some intricate floral design on the back with an arch within the jambs. Those here are distinctly different from the designs most prevalent at Ahnādābād. As examples from this mosque three of these niches (figs. 1, 2, and 4) from the sides of the minars and one (fig. 3) from the front are represented in Plates LII. and LIII.

The stairs leading up to the gallery and roof enter in the thickness of the front wall in the jambs of the central entrance and turn into the minars a short distance up.

The five *mihrābs*<sup>2</sup> in the back wall, are much alike in general style, but with differences in the details, the central or principal one being the richest in carving. It is represented in elevation, plan, and section to scale on Plate LIV. The pulpit or *minbar*<sup>3</sup> bears a close resemblance to that in the Hilāl Khān Qāzi mosque, but is scarcely so well executed.

As in many of the later masjids, there is no *zanāna* gallery in this. The older mosques nearly all have it.

The court measures 149 feet in length by 76 feet broad, and has an open tank at the south end, and a covered one with two well openings near the middle. In the north-east corner is a tomb, which once had a dome supported on twelve pillars, but the roof is now gone. Three graves occupy the floor.

<sup>1</sup> *Arch. Sur. Ind.*, vol. III. p. 21.

<sup>2</sup> *Mihrāb* (plur. *mihrābs*), as already explained (p. 26), is the representative of the *abais* in the early Christian basilicas; they were introduced, in the form that has become general since, by the Khadifāh al-Walid in A.H. 90 (A.D. 709). In the *Qur'ān* the word is used in the sense of a "chamber" (Sūrah III, 32, 33; XIX, 12; XXXIV, 12; XXXVIII, 20).

<sup>3</sup> *Minbar* (usually pronounced *minbar*), the pulpit, from which the *Khutbah* or sermon is recited. In Persia and elsewhere it consists of only three steps, sometimes of wood and moveable, but in Egypt and India they are often more elevated and elaborate structures. Some in Gujārat are handsomely carved. It is said that Aurangzeb objected to the high pulpits as heterodox and had most of them removed for the low three steps of earliest date.

There is also a portion of an old Hindû or Jaina temple 40 ft. by 27 ft., being an open portico, with forty pillars supporting two domes, which has also been converted into a rude mosque by simply constructing a *mihrab* in the west end of it. Probably the outer line of pillars also were at one time filled in by a brick wall,—now mostly gone.

#### HAZRAT KHAN'S TOMB.

Further there is a large, but comparatively modern, enclosure about 465 feet in length by 355 at its greatest breadth. The plan is given on Plate LIV. In the centre is the tomb or *Rauzah*<sup>1</sup> of Hajrat Khân, about 57 feet square, supported by eight piers, with a room in the centre 21 feet square inside. But it is not of much architectural interest. To the west of it is a small mosque 52 feet long by 18 feet deep with nine small *mihribs*. There is another smaller tomb to the south-east of the principal one, and other buildings round the area, which contain many graves scattered about.

---

<sup>1</sup> Tombs of notable Muhammadans are sometimes so called from *ar-Rauzah*—"the garden," in which is situated the tomb of Muhammad at Madinah. In India the larger mausolea are usually called *Dargâhs*,—a Persian term meaning "palace" or "court." The grave is called *qabr*, and as the Muhammadans bury so as to allow the body to lie with the face towards Meikkah, in India the graves are dug from north to south.

DHOLKÁ JÁMI' MASJID : PLAN.

## CHAMPANIR.

### CHAPTER V.

#### CHAMPANIR.

**C**HAMPANIR lies 78 miles south-east from Ahmadabad in the Pauch-Mahals district, about twenty-five miles north-east of Baroda and twenty-two south of Godhrā, the principal town of the district, and nearly a mile to the north-east of the main body of Pāvāgaḥ hill. That great isolated hill rises about 2,500 feet from the surrounding plain, and was a famous Hindū fortress under the Solankhi kings of Gujarāt. On the fall of the kingdom some of the Khichi Chauhāns made it (1297) their stronghold. By these Chauhāns it was held for about 200 years. Early in the reign of Ahmad Shāh I., Rāja Trimbak Bhūpadās of Chāmpānir had, along with other Hindū chiefs, invited Sultan Hoshang of Māndu to attack the Gujarāt sovereign, and in 1418 Ahmad Shāh invested Pāvāgaḥ, but was bought off by the chief. On his return from Mālwa in the following year he laid the territory of the chief utterly waste. Still the Rāja was unsubdued, and in 1449, Muhammad Shāh marched against the fort. Gaṅgādās, the son of Trimbakdās offered resistance, but was forced to shut himself up in his fort, whence sending to Maḥmūd Khilji Sultān of Māndu for aid, Muhammad Shāh raised the siege.

After Maḥmūd Bigarah had subdued Junāgaḥ in 1473, he sent an army to lay waste the Pāvāgaḥ or Chāmpānir territory; and again, in 1482, a Gujarāt officer led a plundering expedition into the same district, but it was boldly attacked by the chief Jaysingh Pātāi Rāwal and defeated with the loss of all the baggage. This roused Maḥmūd, and with a large force he marched against the fortress. At Baroda he was met with offers of reparation for the spoil taken and professions of allegiance, but answered that he would negotiate only with the sword. The place was invested; the chief appealed to Ghyās ad-dīn of Mālwa for assistance, but after taking the field, the latter fearing what might be the result, again retired. The siege was pressed, and in their extremity, knowing too well the conduct of their Muslim enemies to the vanquished, they gave their women and children to the *johar*—a burning holocaust—and then rushed on their enemies, to be all slain. Rāwal Pāthāi and his minister Dungarsī were taken wounded to the Sultān and urged to become Muslims.<sup>1</sup> They refused, and when their wounds were healed they were ordered to accept the creed of Islām or death. On their again declining the chief's head was struck off and exposed on a gibbet.<sup>2</sup> Dungarsī, wresting a sword from a soldier killed one of the Sultān's connexions at a single blow, but was himself slain. The fort of Chāmpānir was taken on the 21th (or 22nd) November 1484, and the Sultān renamed it Muhammadābād.

The siege had lasted about eight and a half months, and Maḥmūd, finding the climate agreeable, made a royal residence where his camp had been, and founded there

<sup>1</sup> *Rās Mālā*, vol. I. p. 373.

<sup>2</sup> A son of the Rāwal—Pratap Singh—is said to have escaped to Hauf on the banks of the Narmadā, and after many raids obtained the *chauth* of the revenues of Halol and Kalol. His grandson Trimbaksingh conquered Bāriya and divided his lands between his two sons who founded the Chhota Udaypur and Devagaḥ Bāriya chiefships.

a city which at first threatened almost to rival Ahmadábád. It must have been of considerable extent, as in the beginning of the present century the ruins extended almost to Halol, about three and a half miles to the north-west.<sup>1</sup>

Mahmudábád Chámpánir was the favourite residence of this sovereign till his death in 1511, and was, even till the death of Bahádur Sháh in 1536, the political capital of Gujarát. It had fine streets and squares with houses of stone. In 1535 it was pillaged by the emperor Humáyun, and on Bahádur Sháh's death in 1536, the court was transferred to Ahmadábád, and its decline from this date was rapid.<sup>2</sup> By the middle of the seventeenth century so much of the country round it had lapsed into forest, that it was infested by tigers and was a hunting ground for wild elephants.

In the end of the eighteenth century it was seized by the Maráthas and finally fell into the hands of Mádhavji Sindia. It was entirely neglected by his successor Daulat Ráo Sindia, and on 17th September 1803, it was taken by the British; at that time half of the walled enclosure or citadel was occupied by silk and brocade weavers. In 1804 it was restored by the treaty of Serji Añjáñgón to Daulat Ráo. In 1812 it contained about 200 inhabited houses, the people being chiefly runaways from Gujarát and a few silk weavers, but the latter were terribly thinned by cholera about 1828.<sup>3</sup> On July 31st, 1853, when it came under British management, the place was almost deserted. An attempt was made to bring in cultivators and clear the forest, but three fourths of the immigrants died and the rest fled. Latterly its only inhabitants are a few Kolis and Náikjás.

The citadel of Mahmudábád Chámpánir is surrounded by a massive wall of freestone—the Jahánpanáh or 'world shelter.' "Enclosing an area about three-quarters of a mile long and two hundred and eighty yards broad, this wall, of great strength, and about thirty feet high, has at regular intervals bastions running north and east at right angles. Though much overgrown with creepers and clinging trees, the wall is in almost perfect repair. A few hundred yards from its western corner is the south or south-west gateway. At the entrance the line of wall falls back about 120 feet, and the road into the citadel lies between the two lines of wall through a rectangular building, probably a guard-room, about 150 feet long and 120 wide, with double gates, and in the south wall richly carved stone windows. On the inner gate is a Persian inscription of which the first figure of a date and the words 'Muzaffar Sháh,' son of Mahmád Sháh' can still be read. Inside the citadel a little west of the gateway is the Shahr-ka Masjid or City Mosque, a beautiful building in fair repair. About 200 yards east and near the centre of the citadel is the Mándvi or custom house. This, probably used as a guard room, is highly finished, very simple and well proportioned. Nearly square, it is open at two ends, each open face having six bays and the two ends joined by five rows of arches, the whole forming a colonnaded chamber of five nearly equal aisles. The roof is flat and massive and though without ornaments, is much relieved on the inside. From the Mándvi

CHAMPANIR. JAMI' MASJID FROM THE SOUTH WEST.

to the citadel's east gate stretches modern Châmpânir, a single street of mean huts. The east gate, built on the same plan as the south gate, equally massive, has the same inscription and the same guard room, only less ruined.<sup>1</sup>

#### THE JAMI' MASJID AT CHÂMPÂNIR.

The Jami' Masjid or Public Mosque stands about fifty yards from the east gate of Mahimudâbâd Châmpânir. It is certainly one of the finest masjids in Gujarât. The minars rise from each side of the central and main entrance, to 100 feet in height, and the whole mosque is generally in excellent preservation, except that the top of the south minar is "shattered by a cannon shot wantonly fired at it by the tyrant Pâtankar, Sindia's governor in 1812."<sup>2</sup> (Plates LVI., LVII., and LVIII.)

Inside, the mosque measures 169½ feet by 81 feet. The pillars are so arranged as to provide for eleven larger domes—four along the front and back and three along the central line from north to south. With this plan, the pillars (exclusive of corresponding pilasters against the walls) run in ten rows from north to south and in twenty-two from east to west, but only four of the longitudinal rows and eight of the transverse ones are complete,—the others being interrupted for the domes. There are thus 172 pillars on the floor,—those rows which cross the domes being about 9 feet 3 inches between centres and the others nearly 6 feet 7 inches. As the pillars are 1 foot 6 inches square this gives an octagon 20 feet 10 inches in diameter to be covered by each dome. Between each pair of domes there will thus fall a space 7 feet 9 inches square, flanked by others 7 feet 9 inches by 5 feet 1 inch. These square spaces, ten in all, are covered by smaller domes. (Plates LVII. and LIX.)

The mosque has one main entrance, 15 feet wide, and four subordinate ones, each of half the width. The floor is about 2 feet above the level of the court, and the front wall at each end is about 23 feet high, with a projecting eaves-board or drip-stone, supported on carved brackets against a panelled frieze, over a string course carved with rosettes. Other two string courses—one at the spring of the arches of the doors, and another 5 feet lower—complete the decoration on the façades of these wing sections. The central portion of the façade, 51 feet in breadth, is raised to a height of 28 feet above the side wings, and against this wall the minars are raised to about double its height. On the ground floor, outside the minars on each side, is a projecting window supported on carved brackets, with side pillars, and over the great entrance is a similar window. Below this last and between the towers, is a bold projecting cornice. The minars are elaborately carved in the style of the period up to the level of the vertex of the central doorway; and above this, at intervals, are carved cornices and decorative string courses. The stairs enter these minars from within the mosque and lead up to the galleries, and to a door at the top of each tower.

On entering the main doorway, the first two pillars, rise to a height of 28 feet 10 inches, to support an upper floor over this inside porch, which is 21 feet wide by 12 feet deep. By this means the level of the general roof, which is only 17½ feet high,

<sup>1</sup> *Bombay Gazetteer*, vol. III. p. 308.

<sup>2</sup> *Bombay Gazetteer*, vol. III. p. 309.

is carried back from the lofty entrance. The two pillars in this area are the only ones that have much carving upon them, and are represented on Plate LXV, fig. 1.<sup>1</sup> In the roof of the second storey just behind the heads of these pillars, the compartment is filled by a carved slab of great beauty and ingenuity of workmanship, which is represented in a photograph on Plate LXII.

About 16 feet behind this porch, and in the centre of the building is the one larger dome in this transverse line, and under this and its flanking areas, and up to the front wall, the structure is carried to a height of three storeys. Under this dome itself there are no floors, but a carved balcony runs round the octagon on the first and second floors, while at the spring of the dome is a deep and richly carved frieze (shown in the section, Plate LX.). The sixteen ribs of the dome are also neatly carved.

The two square corner compartments on each of the outer sides of this raised dome, are crowned by small domes,—the middle flanking areas being flat roofed. On the front side the roofs are carried forward to the façade wall (see also Plate LVIII.).

In the north-west corner of the masjid, an area about 45 feet by 28 on the floor, is, with one *mihrāb*, enclosed by perforated stone screens about 9 feet high between the pillars, as a private chapel for the women. It is entered by a door in the centre of the north wall, and has an octagonal raised seat under the centre of the one dome over the area. There has been a porch outside with steps up to it on the north; but it is now quite ruined.

Including that in the women's enclosure there are seven *mihrābs* in the back wall corresponding to the domes, very similar to those in many of the masjids in Gujarāt of the same age; the central one is somewhat more elaborate than the rest—and is given in plan, elevation and section on Plate LXI. In plan, it will be seen, it is a square with the inner corners cut off. It contained an inscription commemorative of the erection and containing a chronogram of the date of completion in the words:—

خطبه و منبر

—*Khutbah wa minbar* "The benediction and the pulpit"—in which the numerical values of the letters make 914, the Hijra year, corresponding to A.D. 1508-9. This tablet has now disappeared. Other two tablets contain usual verses from the *Qur'ān*.

In the back wall are sixteen perforated stone windows; in the south wall are two and in the north end two with projecting balconies, like those beside the minars. On the back wall outside behind each *mihrāb* are the characteristic buttresses, so elaborately carved, and derived by the Gujarāt workmen from the backs of Hindu temples. Then at the four corners are minarets, with a good deal of carving on the lower shafts, and rising 23 feet over the roof level (Plates LVIII. and LIX.).

The court in front measures 152 feet from north to south exclusive of the corridors and 115 feet from east to west, and is surrounded by a corridor open to the court and against an outer wall, with perforated lattice windows corresponding

<sup>1</sup> Through a mistake of the draftsman the scale to this figure is given as  $\frac{3}{4}$ -inch to a foot, instead of  $\frac{1}{2}$ -inch, or half of the scale to figure 2.

to the interspaces in the inner arcading (see Plate LXIII.). These windows are carved with every variety of patterns, and, as an example, one from the north wall is represented in the second figure on Plate LXV. Much of the corridor has now fallen in; the tank in the court has got filled up; and the area is occupied by large trees. In the middle of the north and south ends were porches leading to doors in the court wall. That on the south side is quite ruined: but on the north is in fair general preservation: It is approached by steps from the west, and has a sort of corridor to the east. The roof of this porch has been finished with much taste, and a carved panel from it is given on Plate LXV. But on the east or front, the porch was of unusual magnificence. Now it is sadly ruined, but the illustrations (Plates LXIII. and LXIV.) will convey some idea of what must have been its architectural merits when complete. It stood on a basement raised to the level of the court within, and was entered by doors on the north and south sides led up to by steps. On each side of these, and also over them were perforated stone windows. On the east was a projecting balcony—of which only the floor, supported by corbels, is left. Above were projecting eaves supported on brackets; the central area was covered with a brick dome raised on a moulded stone base, and at each corner was a small cupola supported on four pillars. Round the roof was a parapet of lattice work. The doorways were carved with a richness that can be best illustrated by the example of that on the north side given on Plate LXIV. Plate LXIII. shows this porch from the south, with a portion of the court wall.

#### RUINED TOMB.

As already stated, the whole site of Châmpânir has for long been all but entirely deserted, and the mosques and tombs have suffered by the destructive influences of climate and vegetation. Trees taking root in their roofs and domes and dislodging the stones till they fall down and the structures become ruins. Nor have they been left to such influences alone. The stones have been carried off for buildings and for road repairs.

Among those remains still found in the forest, attention may be drawn to the ruin of what must have been one of the most ornately carved tombs in Gujârât (Plate LXVI.). The dome has fallen in and the whole is a mere shell. It is not at all large, and had only one arched entrance on each side, with a blind arch on both sides of these entrances. The upper portions of these blind arches were ornamented with niches such as are common on the bases of minarets and by other rich carving; but the pilasters at the corners and jambs of the doorways are carved in patterns of the richest floral designs. Except the two famous windows in Sidi Sayyid's mosque at Ahmadâbâd there is hardly anything elsewhere to match these twelve pillars in richness and variety of decoration. Sides of three of them are represented on Plate LXVII.

The base all round is carved in conventional patterns. A deep projecting drip-stone has been supported above by massive brackets, but the stones have all slipped from the brackets when the parapet above fell.

## NAGĪNA MASJID AT CHÂMPÂNIR.

Some five or six hundred yards to the north of the citadel is the Nagina or Jewel mosque, built of a very light—almost white—stone. It is somewhat on the plan of the Jāmi' Masjid but on a much smaller scale, having only one entrance on each side the main one. The central dome has fallen in, and the wall heads have been dismantled. The minars have two galleries above the line of the central façade, and the style and condition of the structure will be readily gathered from Plate LXVIII.

The lower portions of the minarets have been carved with much care and taste, and the niches are filled with floral designs as elegant and elaborate as any of those so often copied now-a-days in wood from the mosques of Aḥmadābād. One of these from the front of the north minaret and one from the south side of the other are represented on Plate LXIX.

In front of this mosque is another ruined tomb, from which the screens, that must have closed the spaces between the inner square of pillars, have entirely disappeared. It has six pillars on each of the four sides,—the central and outer pairs being farther apart than the second and third, and the fourth and fifth. The spandrels of the arches, in several cases, still contain the perforated panelling that once filled them all and at least the smaller arches, and most probably the corner arches also. On the west side is an advanced porch. The central area of the building was covered by a brick dome with bold projecting ribs, and the corner spaces were roofed by smaller ones of the usual plain type. The projecting eaves have mostly fallen—as was almost certain to occur where there was only a supporting bracket for each pillar of the corridor. Its general appearance will be best understood by a study of the photograph Plate LXX.

## CHAPTER VI.

## MEHMUDABAD.

**M**EHMUDÂBÂD or Mahmûdâbâd is a considerable town in the Khefâ or Kaira district about seventeen miles south-south-east from Ahmadâbâd, and on the railway to Bombay. It takes its name from Sultan Mahmûd Bigarah who founded the city about 1479, and fortified it. Mahmûd III. (1536-1554) formed beside it a large Deer park, five or six miles long, at each corner of which he built a pleasure house with gilded walls and roof. During the first half of the sixteenth century a great festival was celebrated here annually on the occasion of the birthday of Muḥammad, when the learned Muslim teachers rehearsed their traditions before the court.<sup>1</sup> In the seventeenth and eighteenth centuries the place fell into decay, but during the last half century it has greatly advanced in population and prosperity.

## TOMB OF MUBÂRAK SAYYID.

About a mile and half east of the town, near the village of Sojâli is a small group of tombs belonging to about the end of the fifteenth century. The most important of these is the mausoleum of Mubârak Sayyid one of Mahmûd Bigarah's ministers, erected in 1484 (Plate I.). It stands on a platform 4 ft. 7 in. high and 95½ feet square, with an advanced porch on the east (Plate LXXI.). The pillars are massive and each is in the form of four square pillars grouped together. The innermost twelve piers forming a square, 36 feet between centres, are joined by perforated screens, and support the central dome. Outside these, which enclose the tomb proper, is a double corridor supported on thirty-six columns, with arches between each pier and roofed by small domes of various internal patterns (Plate LXXIII.). The piers have plain shafts with moulded bases carved with much taste and elegance, as is also the cornice of the podium or platform, which has also a string course running along at half its height ornamented with a very delicate floral pattern (Plate LXXV.).

The porch has four advanced pillars supporting small domes; and in front of these other two at the top of the steps, while over these and the two immediately behind them, a very neat little pavilion on twelve pillars, stands on the roof. The walls over the twelve central pillars are raised to form a square base for the principal dome, though inside the corners are also cut off by arches, for the support of the dome itself. Over the roof level are windows filled with perforated screens to admit light and air; and at a height of 38 ft. from the floor the dome proper begins. On the corners of its base are

<sup>1</sup> Bird's *Mirat-i Ahmadi*, pp. 212, 269; Gladwin's *Ain-i Akbari*, vol. II. p. 64; *Voy. de Olenrius* (ed. Paris, 1659), tom. II. p. 133; Thevenot, *Voy.* vol. V. p. 97. The birthday of Muḥammad is said to be the 10th of Rabi'ul-Awwal; and he died on the 12th of the same month (A.H. 11) at the age of 63 lunar years and 2 days.

four little domed kiosks or pavilions, each with four pillars about 8 feet high. From the floor to the top of the inner curve of the dome is 57 feet; and from the ground level to the top of the finial is 70 feet. (See Plate LXXII.)

On the north, south, and east sides are steps by which to ascend to the platform; and, as already mentioned, the tomb, which is in the centre, is surrounded by screens of the most delicate perforated stone work. Most of these have been injured more or less, but much of the work is in fair preservation. That in the west end of the south face is given on Plate LXXIV. The inscription which will be remarked on the frieze, consists of extracts from the *Qur'ân*; there does not seem to be anywhere now a record of the builder or the date of the monument. Taken as a whole it is the most beautiful of these provincial examples—and “of its class one of the most beautiful in India.” “There is,” says Mr. Fergusson, “a simplicity about its plan, a solidity and balance of parts in the design, which is not always found in these tombs, and has rarely, if ever, been surpassed in any tomb in India. The details, too, are all elegant and appropriate, so that it only wants somewhat increased dimensions to rank among the very first of its class. Its constructive arrangements, too, are so perfect that no alteration in them would be required, if the scale had been very much increased.”

At the head or north side of the tomb four of the pillars have been enclosed to form a tomb for some one: but this is a comparatively modern addition. Three burials have also been made in the central chamber, beside (or rather at the head of) the two original interments of Mubarak Sayyid and his son Mirân Sayyid.

To the south-west of this tomb are three smaller ones—one said to be that of the architect who built this tomb and that of Qutb al 'Âlam at Batwâ, and the other two of Saif ad-din and Nizâm ad-din—brothers of Mirân Sayyid's mother.

#### BHAMARIA WELL.

In Mehmudâbad itself, there is a step-well of the usual construction, and probably of the fifteenth century. Outside, a little way from the town, on the way to Khairâ or Kheda, is also the Bhamaria well, now in a very dirty and neglected state. Local tradition ascribes it to Mahmûd Bigarah, and this is probably correct enough. But when it is asserted that he made it for a hot weather retreat, and that the two stone arches over it were to hang the king's swing upon, we may reserve our full assent.

The well was probably in a pleasure garden, and is cut in the solid rock (Plates LXXVI., LXXVII.). The shaft is octagonal, about 14 feet across and over the mouth of it are two arches from east to west, which support lintels; and on these was placed the apparatus by which water was drawn up, and thrown into stone troughs on the north and west sides. On all four sides of the opening of the shaft were circular rooms—those east and west of 10 feet 8 inches diameter inside, and the other two 13 feet 3 inches diameter. Each of these was open to the shaft, and two of them had, in the openings, the troughs referred to. Outside, on the platform four stairs descended (as shown on Plate LXXVI.) to a lower storey,

in which were eight rooms round the shaft: those in the corners each 8 feet square; two, east and west of the shaft each 12 feet 4 inches by 7 feet; and the other two 14 feet 7 inches by 7 feet 6 inches. These last four are each crossed by two Saracenic arches, and each has a neat balcony window into the shaft of the well (Plate LXXVII.).

So long as the water in the well was kept fresh, nothing could be cooler during the heat of the day in early summer than these rock-hewn chambers, and doubtless they were often occupied for an hour or two during seasons of recreation. In the other four sides of the octagon are narrow windows, arched above, and with projecting sills, and behind these are narrow spiral stairs descending to a lower storey, the tops of two narrow windows in which were just visible above the water, when the survey was made. But the water was so foetid, no examination could be made below. The bottom is doubtless deeply silted, the mud standing up to about 27 feet from the well mouth. The section given on Plate LXXVII. is from north to south, cutting the main arches over the well, and is to double the scale of the two plans on Plate LXXVI.

### THE BUDDHIST STUPAS OF AMARAVATI AND JAGGAYYAPETA DESCRIBED AND ILLUSTRATED.

By J. BURGESS, C.I.E., LL.D., F.R.S.E., ETC.

*With the Aśoka Edicts at Dhauli and Jangala, translated by PROFESSOR G. BÜHLER, C.I.E., PH.D., LL.D., Vienna.*

*With 69 Plates of Sculptures and Inscriptions, mostly autotypes, and 32 Wood-cuts.*

*Super-royal quarto, half-bound, gilt top. 3 Guineas.*

"Mr. Burgess has recently issued an admirable monograph on the Buddhist Stūpas at Amarāvati and Jaggayyapeta, supplementary to the late Mr. Fergusson's 'Tree and Serpent Worship,' and has thus, to some extent, wiped away the reproach of the Southern Presidency."—*Quarterly Review*, July 1889.

LONDON:—KEGAN PAUL, TRENCH, TRÖBNER, & Co. CALCUTTA:—THACKER, SPINK, & Co.  
BOMBAY:—THACKER & Co. (Limited).

# EPIGRAPHIA INDICA SUPPLEMENTARY TO THE CORPUS INSCRIPTIONUM INDICARUM.

Edited by JAS. BURGESS, C.I.E., LL.D., F.R.S.E., &c.

*Vol. I, super-royal 4to, 482 pages, with 35 facsimile plates, and Vol. II, 518 pages, with 51 plates. 21s. 6d. each.*

A côté des diverses séries de 'Reports' dont la marche est forcément peu régulière, M. Burgess a créé un organe périodique, *l'Epigraphia Indica* . . . spécialement réservé aux inscriptions. L'épigraphie indienne aura ainsi son *Ephémériste* avant d'avoir son *Corpus*. Si M. Burgess arrive de cette manière à centraliser, ne fût-ce que dans une certaine mesure, les travaux épigraphiques actuellement éparpillés dans une infinité de recueils, dont plusieurs sont des publications locales absolument inaccessibles en Europe, il aura rendu une fois de plus un service inestimable aux études indiennes.—*Revue de l'Histoire des Religions*.

At the Congress of Orientalists lately held in London, the very highest praise was awarded to Dr. Burgess for his share in this undertaking as chief editor. No higher praise could be accorded here to Dr. Burgess than this statement of the value attached to his labours by so many of the highest Oriental scholars.—*The B. Inst. of Dr. Arch. Journal*, Dec. 22, 1892.

CALCUTTA:—SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA; THACKER, SPINK, & CO.  
LONDON:—LUZAC & CO.; BERNARD QUARITCH; A. CONSTABLE & CO.

- Notes on Bijapur and Satranjaya, with two maps, Bombay Government Selection No. 14; (*New Series*), by H. COLEMAN, M.R.A.S., Archaeological Surveyor of Western India. Price 12 annas.

BOMBAY:—GOVERNMENT CENTRAL PRESS.

## THE SHARQI ARCHITECTURE OF JAUNPUR: WITH NOTES ON ZAFARABAD, SAHET MAHET AND OTHER PLACES IN THE N.-W. PROVINCES AND OUDH.

By DR. A. FÖHRER, Ph.D., and EDMUND W. SMITH, ARCHITECT.

Edited by JAS. BURGESS, C.I.E., LL.D., *Director-General of the Archaeological Survey of India.*

*Illustrated by 74 Plates of the Sharqi Architecture of Jaunpur, &c. Super-royal 4to. 8vo. Price 21s. 6d.*

The Government may properly be urged and expected to continue this survey in the North-Western Provinces, and to utilise the Architectural members of the Survey, moreover, in advising and controlling a reasonable conservation of Historical Monuments in the Indian Empire.—*Journal, R. Institute of British Architects*, 19th Jan. 1890.

The first volume of Dr. Burgess' new series is a scholarly and exhaustive monograph on a special and well-defined architectural period. It is published in the form of a handsome quarto, . . . supplying a valuable and interesting record of the history and architecture of Jaunpur, a city which for nearly a century vied with imperial Delhi both in power and splendour.

Unlike the majority of the volumes in the former series, the Report is one of which the Government has no reason to be ashamed, and it may be safely recommended to anyone interested either specially in Jaunpur or generally in Indian architecture as an adequate and trustworthy source of information.—*The Pioneer*.

CALCUTTA:—SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA; THACKER, SPINK, & CO.  
LONDON:—LUZAC & CO.; BERNARD QUARITCH; A. CONSTABLE & CO.

*Super-royal 4to., paper covers.*

cloth, at 22s. 6d. each, cash; or the nine volumes  
together for £10 nett.

Volumes I, II, and III are not sold separately.

THE MANAGER, EDUCATION SOCIETY'S PRESS, BOMBAY. LONDON:—BERNARD QUARITCH.

W. GRIGGS & SONS', *Ld.*, LIST OF PUBLICATIONS.

*Now ready, or in the press.*

PRIVATELY PRINTED FOR SUBSCRIBERS ONLY.

THE RULERS OF INDIA  
AND THE  
CHIEFS OF RAJPUTANA,  
1550—1895.

DEDICATED BY SPECIAL PERMISSION TO  
Her Majesty the Queen-Empress.

*The work will consist of a series of portraits of the Chiefs of Rajputana and of their ancestors as far back as the founder of each family, or the reign of Akbar, that is, for about 300 years.*

*The portraits will be careful reproductions in colour of originals which are in the possession of the Chiefs, and were the work, it is understood on good evidence, of contemporary artists in each case.*

*The Rajputana princes have, in most instances, shown considerable interest in the project, and have placed all their portraits at the disposal of Brigade-Surgeon Lieut.-Colonel Hendley, C.I.E., of Jeypore, the author of numerous works on Indian art, who will write the text for the book, and under whose supervision the portraits have been copied.*

*In order to make the work as complete as possible, it is proposed to include photographic reproductions of portraits of the British sovereigns from Queen Elizabeth, and of the Governors-General and Viceroy from Warren Hastings. The frontispiece will be reproduced from the Jubilee portrait of H.M. the Queen-Empress, who has been graciously pleased to accept the dedication of the book, and has also permitted the copying of miniatures and pictures of British sovereigns in the Royal Collections. The portraits of the Governors-General have been reproduced by kind permission of H.E. the Earl of Elgin, G.C.M.G., G.C.I.E., the present Viceroy and Governor-General, from the paintings in Government House, Calcutta, which have never before been published.*

*There will also be coloured portraits of the Moghul Emperors from Akbar to Bahadur Shah.*

*There will be in addition to the frontispiece (the portrait of Her Majesty the Queen-Empress), about two hundred portraits in colour on nineteen plates, and three or four collotype plates of portraits in monochrome of the British Sovereigns and Viceroy, as well as the descriptive matter. The whole will be handsomely bound, and form an edition de luxe of special value to all who take an interest in the history of India and of its oldest families and in the noblest of its royal races.*

*In 4to Imperial (size of "Journal of Indian Art and Industry").  
Price to Subscribers, bound in cloth, £2 : 2 : 0; in morocco, £2 : 12 : 0.*

WILL BE READY IN JUNE.

**THE BUDDHIST CAVE-TEMPLES OF AJANTA.** In two volumes. Edited by JOHN GRIFFITHS (late Principal of the School of Art, Bombay). With Map; 158 page plates, about half of which are in colours of originals; and text with 88 cuts of details. Imperial folio (24 by 15 inches). Price of the two volumes, £10:10:0. Will be ready in April. Only a few copies remain for Subscribers in Europe.

**DAMASCENING OF ARMS IN GOLD.** A selection of the best examples chiefly of sword hilts and dagger handles, with descriptive letterpress by Brigade Surgeon Lieut.-Colonel T. H. HENBLEY, C.I.E. The volume (Imperial quarto) contains Frontispiece, 105 examples of Damascening in 29 full-page, coloured illustrations, and 2 plates of Tools. Price to subscribers, 6s.

**PHOTOGRAPHS OF THE ANCIENT MONUMENTS, TEMPLES, AND SCULPTURES OF INDIA.** Published by subscription. The Secretary of State for India in Council has granted permission to use the very large collection of photographic negatives of Ancient Buildings, Sculptures, &c., from all parts of India, now in the possession of the India Office. These illustrate very fully the history and development of the various styles of Indian Architecture from the earliest times, in Buddhist, Brahmanical and Jaina Caves to Dravidian, Chalukyan, Indo-Aryan, and Saracenic temples, mosques, and other buildings. They constitute an indispensable series of illustrations of the art history and mythology of India. A selection of 500 is in preparation in portfolio form, Imperial 4to (average size of picture, 8 in. by 10 in.), with brief letterpress description, £30. The portfolios will be issued in three divisions of about 165 plates, price £10 each. The plates have been selected by Dr. J. A. BURGESS, C.I.E., late Director General of the Archaeological Survey of India. **PART I. NOW READY.** Lantern slides of this series will be prepared for lecture purposes; price £20 per set of 500.

**JEYPORE PORTFOLIO OF ARCHITECTURAL DETAILS.** Part VII, String and Band Patterns; Part VIII, Wall Decoration. Many of these are beautiful in design, and being drawn to scale, will be found most useful to decorators, workers in stone, metal, wood, or other material; also instructive to students in Technical and Art Schools, and interesting to all who appreciate native Indian art. Price £1:10:0 each part, with descriptive notes, in cloth portfolio complete. Only a few copies are retained for Subscribers in Europe.

**INDIAN ART IN MARLBOROUGH HOUSE AND SANDRINGHAM HOUSE.** By Sir George C. M. BIRDWOOD, K.C.I.E., containing 30 illustrations, mostly in colours. Imperial 4to, 10/-.

**PORCELAIN TILES.** A selection of eighteen patterns, in colours, of Porcelain Tiles from the Rauza of Mazai Sakhi, Musulla, Herat, and the Shrine at Mazar-i-Sherif. Collected by the Afghan Boundary Commission 1885. In portfolio, Imperial 4to, 10/-.

**THE JOURNAL OF INDIAN ART AND INDUSTRY.** Published quarterly. Richly illustrated with numerous plates in colour and gold, illustrative of the Arts, Architecture, Industries, and Manufactures of Hindustan. Containing Papers on Indian Gold, Silver, Copper, Brass, and other Metal Art Ware; Wood and Ivory Carving; Bidri Ware, Lacquer, Jewellery, Gold Work, Cloth Stamping and Dyeing, Bookbinding, and Decorations, &c., sent free by book post to any part of India or within the Postal Union, and sold to those remitting 2/- for each part in advance.
